Edmonton, Alberta
T6N 1C6
Tel: 403-450-3729
Export Contact: Mr. David Siever, President

Comptronic Devices Limited designs and manufactures a series of light and sound stimulation, brain wave entrainment devices called the D.A.V.I.D. JR plus and the Paradise. These products are used by a variety of users to promote and assist in relaxation. In 1985, Comptronic Devices Limited designed the first D.A.V.I.D.1 (Digital Audio/Visual Integration Device) using light and sound pulses to enhance relaxation in clinical settings and applications. Since this time, Comptronic Devices Limited, through careful market studies and a well developed product research and development team, designed the D.A.V.I.D. JR plus, a portable, fully programmable and inexpensive relaxation device.

In 1990, sales were approximately 70 percent for exports. In June 1989, they contracted with a General Distributor in France for Europe and the Middle East. They have agreements with ten distributors in the United States located in California, Massachusetts, Maryland, Texas, Washington, and Tennessee. They are currently corresponding with companies in the United Kingdom, Taiwan and Australia to negotiate having them represent their products.

While Comptronic Devices Limited is interested in developing a worldwide market, their current focus for marketing is to continue developing Europe with their general distributor, develop a stronger distributor network within the United States and to locate a general distributor for the Pacific Rim countries. Comptronic Devices Limited would be interested in selling licensing agreements with other countries. Because their product involves high technology electronics, they would also consider contracting the manufacture overseas or to purchase electronic parts direct from manufacturing companies in other countries.
