

Rome for teaching the doctrine of the earth's revolutions. Galileo was right, and the world moves.

Science has many things to achieve in agriculture, manufacture, mining and commerce. The science of *price cycles* is yet in the cradle of its infancy, but waiting its time to mature full development, to unfold its principles, and declare its oracles to all mankind, and to demonstrate that the causes and the laws of nature in production are not past finding out; and that man in his onward path of progress, with the aid of electric science, will ultimately grasp the future, and make plain all the ways of God; which, when accomplished in this world, will be the acme of human knowledge, the consummation of human perfection, and the end of human destiny.
