## HAD BACKACHE

Was Unable To Do House-  
work For Two Years

Many Women Suffer Untold Agony  
From Kidney Trouble.

Very often they think it is from so-called  
"female disease." There is less "female  
trouble" than they think.

Women suffer from backache, sleepless-  
ness, nervousness, irritability and a drag-  
ging down feeling in the loins. So do men,  
and they do not have "female trouble."

Why, then, blame all your trouble to  
"female disease"?

Most of the so-called "female disorders" are no more or less than "kidney disorders," and can be easily and quickly cured by Doan's Kidney Pills.

Mrs. C. Dupuis, Bellevue Village, N.B., writes: "I was unable to do my house-  
work for two years on account of back-  
ache. I could not get up the stairs. Doan's  
Kidney Pills cured me permanently after  
doctors failed to even relieve the pain. I  
can highly recommend them to all sufferers  
from kidney trouble."

Price 50 cts. per box or 3 boxes for \$1.25  
at all dealers or mailed direct on receipt  
of price by The Doan Kidney Pill Co.,  
Toronto, Ont.

## Preparing for Grain Crops in Sask.

[Continued from page 622.]

### SUMMER-FALLOW.

"The true worth of properly pre-  
pared fallows has been clearly demon-  
strated in past years in every dis-  
trict of Saskatchewan.

"The work of preparing land for  
crop by fallowing is carried on in so  
many ways in different parts of the  
country, that perhaps a few words on  
some of the methods employed may  
be of use to at least some of the new  
settlers.

"It has been observed in some  
parts of Saskatchewan that the land  
to be fallowed is not, as a rule,  
touched until the weeds are full  
grown and in many cases, bearing  
fully matured seed. It is then  
plowed.

"By this method, which, no doubt,  
saves work at the time, the very ob-  
ject of a summer-fallow is defeated.  
In the first place, moisture is not  
conserved, instead of using the sum-  
mer-fallow as a means of eradicating  
weeds, a foundation is laid for years  
of labor and expense by the myriads  
of foul seeds turned under.

"The endless fields of yellow-flow-  
ered weeds generally Ball Mustard  
(Neslia paniculata), testify to the in-  
different work done in many districts,  
and, while no weed is more easily  
eradicated by a good system of fal-  
lows there is no weed that is more  
easily propagated or takes greater  
advantage of poor work on fallows or  
of fall or spring cultivation.

"As has been pointed out in my  
previous reports, early and thorough  
work on fallows is absolutely neces-  
sary to success, and I here repeat the  
methods and results of tests carried  
on for some years past.

"First Method.—Plowed deep (6 to  
8 inches) before last of June; surface  
cultivated during the growing season,  
and just before or immediately after  
harvest, plowed 5 or 6 inches deep.

"Result.—Too much late growth if  
season was at all wet; grain late in  
ripening; and a large crop of weeds if  
the grain in any way injured by  
winds.

"Second Method.—Plowed shallow  
(3 inches deep) before the last of  
June; surface cultivated during the  
growing season, and plowed shallow  
(3 or 4 inches deep) in the autumn.

"Result.—Poor crop in a dry year;  
medium crop in a wet year. Not  
sufficiently stirred to enable soil to  
retain the moisture.

"Third method.—Plowed shallow  
(3 inches) before the last of June; sur-  
face cultivated during the growing  
season, and plowed deep (7 to 8  
inches) in the autumn.

"Result.—Soil too loose and does  
not retain moisture. Crop light and  
weedy in a dry year.

"Fourth Method.—Plowed deep (7  
to 8 inches) before the last of June;  
surface cultivated during the growing  
season.

"Result.—Sufficient moisture con-  
served for a dry year, and not too  
much for a wet one. Few or no  
weeds, as all the seeds near the sur-  
face have germinated and been killed.  
Surface soil apt to blow more readily  
than when either of the other methods  
is followed. For the past fourteen  
years, the best, safest and cleanest  
grain has been grown on fallow work-  
ed in this way, and the method is,  
therefore, recommended.

"In the first place, after the rains  
are over in June or early in July, as  
they usually are, no amount of work,  
whether deep or shallow plowing, or  
surface cultivation, can put moisture  
in the soil. The rain must fall on the  
first plowing and be conserved by sur-  
face cultivation.

"Weeds, when allowed to attain  
their full growth, take from the soil  
all the moisture put there by the  
June rains, and plowing under weeds  
with their seeds ripe or nearly so, is  
adding a thousand-fold to the my-  
riads already in the soil, and does  
not materially enrich the land."

"During the past two years the term  
"dry farming" has been applied to
