. <0>-TWO WORLDS NOW ON EXHIBITION.

There are two planets now in the morning sky which attract special attention, although they are surrounded by some of the most brilliant twinklers in the heavens, such as Sirius Aldebaran, Capalla, and other stars of the conspicuous of these planets is Jupiter various stages in the development of an organic being, so the astronomer, by turning
alls telescope from Jupiter to Mars, can exalbit first a weld in its infancy and then a
world in its old age. It is most interesting
and wonderfal, after watching the huge
belted and spotted globe of Jupiter, herdly
yet redeemed from chacs, the scene of the
material transport of the strength of the strength of Mars, a
globe that long ago passed from the stage of
active world growth, and which is alreedy,
water the strength of water the strength of water.

less and lifeless condition of our moon.

Independently of the interest in their contrasted conditions these two planets are very aitractive to possessors of telescopes. The ever-changing aspect of Jupiter's markings, and the defloate colors that can be detected upon different perio of his disk, as well as the motions of his four moons, which are seen motions of his four moons, which are seen
