

Iodine and Bromine are superior alteratives for improving and purifying the depraved nature of the blood. They are the best remedies we possess for checking and controlling the swelling and induration of the glandular system, the ulcerative process in scrofulous complaints, the diseases of the lungs, etc. Obviously the main point in such serious affections is to check and control at once the ulcerative process, and to do so it is of the greatest importance to use PROMPT AND ACTIVE MEDICATION.

Superiority of Fougere's Cod Liver Oil over Simple Cod Liver Oil.
—Until of late, natural and pure Cod Liver Oil has been the best remedy, and the one most generally used, with more or less success, in diseases of the lungs, when of a tuberculous character. The period of the malady, when the oil was first employed, and also the purity and strength of the remedy, accounting for the success or failure.

Pure Cod Liver Oil is more likely to cure Consumption, Scrofula, Rickets, Swelling of the Glands, &c., in the first stage of the disease; in the second and third stages it mitigates the severity of the symptoms and prolongs the life of the patient, but seldom saves it.

The reason for this difference of action is simply, that the pure oil contains iodine, bromine and phosphorus only in minute quantities, which although sufficient to cure a disease in the beginning, is not powerful enough when it assumes a graver type.

If we suppose for an instant the discovery of a new, natural cod liver oil, containing more iodine, bromine and phosphorus than the oil in present use, there is not the least doubt but that every physician would prescribe it in preference, fully confident of its enhanced qualities. The natural consequence of this proposition explains satisfactorily why the medical profession should give, *and do rightly give*, the preference to Fougere's Compound Iodinized Cod Liver Oil, which contains a larger proportion of Iodine, Bromine and Phosphorus than the oil in present use; these active elements, as before remarked, are in such a peculiar combination that their action is slow, regular and persistent, being successively set at liberty in the economy, in proportion as the oil is decomposed in the process of animal life.

Some physicians are so well convinced that the curative properties of the oil reside in these three substances, that to obtain a full effect, they prescribe very large doses of the oil, sometimes giving two, three, and even four tablespoonsful, three or four times a day, the larger quantity amounting to no less than half a pint daily. That their object is not attained is fully proven by physiologists, who have demonstrated that only the quantity of oil, emulsionized by the pancreatic juice is digested
