ENGLISHMAN DOES HIS BEST WHEN CARED FOR

French Observer Concludes That Fed on Roast Beef, He Fights Well.
HAVE MASTERED THIS WAR
Leaders Have Learned New Game, and Nothing Now But Victory.

Paris, Aug. 26.—Adolphe Brisson, formerly a French Minister, has just returned from a visit to the English front. He gives a very vivid and interesting description of how a great army is administered in the field. Of special importance is the manner in which the British soldier is cared for.
"We meet generals who are not only warriors," said M. Brisson, "but who are great administrators, trained in India, Egypt, Africa, accustomed to plan the details of a campaign. They spare neither expense nor trouble in establishing the base of a lengthy military action."
"I admired their calm confidence in the sovereign power of Great Britain. Always they made the same statement:
"We English need time to understand. We did not know war like this. It had to be learned. We are slow in starting, but we are there now, and nothing can stop us."
"The greatest commendation is due to the sanitary service. On principle the English soldiers do not want barracks. The fighter must live and be cared for under a tent. He breathes better; cleanliness is easier to keep; vermin are easier to destroy; every morning everything is burned.
"In camp, be it for the healthy or the wounded, flowers cheer the eye; the English soldier delights in them.
"On their arrival the men receive rough and vigorous disinfection. They are bathed and scrubbed; clothing boiled and washed; then the soldier is dressed neatly in a white shirt with soft collar, red tie, blue vest with white revers and olive trousers.
"He then is taken to a paradise, a garden in which are scattered the sleeping tents, dining tents; for his recreation he finds tennis courts amid flowers, and benches to rest upon. For his comfort even a dentist; yes, even a chiropodist! And the men's attention is to the cheer! "We mean," said a general to me,

REORGANIZED SERBIAN ARMY ON THE MARCH.
Picture shows members of the re-organized Serbian army, which has taken its place alongside the Allies in the Balkans, and has figured recently in several victories against the Bulgarians.

on seeing my amazement, "that on returning to the trenches our soldier may be able to say to his comrades: 'If you are ill or wounded, you'll be mighty well off in the hospital.'"
"Be it noted here, too, that nurses and soldiers in the service of ambulances and hospitals are in comfortable quarters, well fed and paid. They work, they must be cared for," is the slogan.
"It is a fact that the Englishman does his best when he is well looked after. Give him his roast beef and he will fight well."

CLEANSE THE BLOOD AND AVOID DISEASE
When your blood is impure, weak, thin and debilitated, your system becomes susceptible to any or all diseases.
Put your blood in good condition. Hood's Sarsaparilla acts directly and peculiarly on the blood—it purifies, enriches and revitalizes it and builds up the whole system. Hood's Sarsaparilla has stood the test of forty years. Get it today. It is sure to help you.

HOW TO KEEP WELL

BY JOHN W. S. McCULLOUGH, M.D., D.P.H., CHIEF OFFICER OF THE PROVINCIAL BOARD OF HEALTH.

THE EYE.
THE HUMAN EYE is a wonderful instrument, but under the trying conditions of modern life it often fails to meet the demands put upon it, and serious trouble of all sorts results because we do not help out by getting glasses to supply Nature's defects.
Particularly at the time when children begin their school life, the new and difficult uses made of the eye often bring on eye-strain and a host of resultant disorders.
The signs of beginning eye strain may vary in different cases. At first only a slight fatigue may be noticed after reading or sewing. Little muscles are contracted and changing the shape of the eye to adjust it to the different distances somewhat as you change the focus of a camera according to the nearness of the object to be photographed. If the eye is abnormal in any respect these muscles have to work too hard, and even though we may by this unconscious effort be able to see clearly, yet the strain is present. In such case we are seeing by a constant effort, while if glasses were provided to correct the defect of vision they would do this work and save us the strain.
A careful and thorough examination of the eyes should be made by a competent person. Many a miserable hour would be saved if this were done in time.
Because of defective eyesight a child may be dull, fretful, and backward in school, without anyone guessing the reason. An examination of the eyes reveals serious defects; these are corrected by proper glasses, and the effect is most marked. The child appears happier, makes good progress in his studies, and takes his rightful place in the school community.
Glasses or no glasses, there are some things that cannot be done with the eyes except at grave peril. Too little light strains the eyes, and so does too much. A direct glare right in the face is quite as bad as a room that is too dim to see properly. For reading, sewing, or other work which requires close accurate vision the light should be clear and steady and should come from above and behind.

Earache is a common and distressing trouble in young children. It often occurs in connection with winter colds and in the course of measles and scarlet fever; it is due to an infection of the middle ear, the poisonous germs being carried from the throat up the little passage called the Eustachian tube to the middle portion of the ear just inside the ear-drum. In other cases it occurs in children who have adenoids and large tonsils. In cases of earache which are severe and which may easily be neglected because the mother may not know the danger, the ear-drum may burst from the pressure of mucus inside it and the child is left with a running ear. This is often difficult to cure. In other cases the infection may spread to the cells or honeycomb of bone in the mastoid bone behind the ear, and necessitate an operation. These bad germs frequently are prevented by a timely puncture of the drum, which at once gives relief and soon clears up the case. In an earache of any severity or where the pain lasts over a day or so, always call in a competent physician or an ear specialist, and give your child the best chance possible. In many cases relief may be given by putting a few drops of warm olive oil in the ear and a hot water bottle outside.

2.—Responsibility for Disinfection. J.D., Smith's Falls.
Q.—Who pays the expenses of disinfection after a case of contagious disease?
A.—This question is answered by Sections 29 and 62 of the Public Health Act.

tense heat and drouth of July, but currents did better.
Pastures and Live stock: Pastures were of the best until the drouth began to tell about the latter part of July. Later on most of the fields, and especially in Western Ontario, were browned by the continued drouth, and in some quarters cattle on the grass had to be helped out by hay or other extra feed. Notwithstanding this drawback, and the extremely warm temperature prevailing during the summer, live stock generally are in good condition—somewhat thin, but hearty. It is thought that there will be plenty of fodder for fall and winter supplies, notwithstanding the expected shortage of grain, straw, roots and corn ensilage, farmers counting upon the splendid crop of hay to carry them through. Much, however, will depend upon the weather of the next month or two.
Dairy produce has been generous in supply, and the demand for cheese, butter, cream and other lines was never stronger. There has been some shrinkage in production since the drouth, but the high prices now offering are tempting dairymen to keep up the milk supply as far as possible.

AUGUST FORECAST
The following statistics of the principal field crops of Ontario for 1916 shows the acreage as compiled from individual returns made by the farmers to the Ontario Bureau of Industries and the yields as estimated by a large and experienced staff of correspondents, who give probable yields according to conditions on August 10th, 1916.
Fall Wheat: 704,857 acres will produce 15,684,922 bush. or 22.2 bush. as against 811,185 acres 24,727,011 bush. and 30.5 in 1915. 685,692 acres yielded 14,333,548 bush. and 20.9 in 1914. The annual average for 34 years, 1882-1915 was 21.3.
Spring Wheat: 144,305 acres 259,257 bush. or 17.7 per acre as against 162,142 acres 3,349 bush. or
