Poultry

GUIDING THE AMATEUR IN POULTRY RAISING (T. F. McGrew in N. Y. Sun.) Article III. EGG PRODUCTION

All who keep hens are quite defrom of having eggs from them durthe winter months, when eggs are scarce and high in price. The are scarce and high in price. The facts are that about the best egg-yield that any one has been able to get from hens in November or December has been a 20 per cent. yield; that is, a average of twenty eggs per day from 100 hens, or six eggs per month from each hen. Few get so many; the majority will scarcely average half as many. About January 1 the egg yield is likely to increase, and the egg yield is likely to increase, and will naturally lay more eggs from then on to April, during month more eggs are usually laid than at any other time. If the wea ther continues to be cold and unsea-semable during the early part of April the larger yield may extend into

The very best of all eggs are thos The very best of all eggs are those laid during April, May and June. Hens lay best when they can have warm growing weather, which produces the growing green shoots, bugs, worms and beetles for them to eat. Wood of this kind helps the hen to fift the shell full of albumen that is dense and full of solid suprepance call. se and full of solid substance, call ed the white of the egg. Such eggs are best for hatching, best for cold rage and best for preserving in water glass. They contain less wat-er than eggs laid during the winter are larger and better shelled.

The use of electric lights in the laying houses is becoming more general object is to enable the hens to nee to eat as many hours in winter or during short days as they can when the days are longer. The hen must be the crop before she goes to roost. If this must be done prior to four e'clock in the afternoon she will be deprived by darkness from replenish-ing her food suply until about eight in the morning. This causes sixteen hours of fasting, leaving only eight hours for replenishing of her food supplies. In fact, her crop, her eso-phagus and her gizzard are all to be empty and it will take an hour to ge them into full action again, which cuts the process of feeding down to about seven hours.

With electric lights in use it is es cential either from the point of in-creased egg yield or fast growth of young stock that the hens shall have young stock that the hens shall have all they will eat of the most nutriti-cus grain and dry mash mixture. Scarcely any one who keeps fowls

DR. MARTEL'S PILLS FOR WOMENS AILMENTS

Bessends of women have testified in the fast is pure regarding the healing qualities of Dr. MARTELS FEMALE PILLS. A Scientifically geopared remedy for delayed and painful generatricition. can resist the temptation of having e little chicks. This comes with the warm days of spring and spread ike the measles.

I knew a man who kept twelve or

fifteen hens. He purchased a 250 egg incubator and a coal stove brood-He was a novice at the work and sixteen living chicks from over hundred eggs. His whole family sursed the chicken business and those who make appliances.

I led the way to the chicken house and there nestled down quietly and zeady was a broody hen, so tame she and made a nest of soft straw and put this on the floor of the little house that had been arranged for the new brooder. Three of the eggs that had not hatched in the incubator were placed under her. She and two other chicks. This was all they had room

Chatham, Ont.:—"For many years I suffered with stomach trouble and I tried many remedies but they seemed to be a failure—my stomach seemed to be getting werns instead of better. One day I came in possession of a bottle of Dr. Pierce's Golden Medical Discovery and took it. My stomach seemed completely cured. I have great faith in this medicine and hope any sufferer that reads this will give the Discovery's a trial. Once tried, you will never a trial. Once tried, you will never bout it."—C. TITUS, Jr., 28 Duke St.

be without it."—C. TITUS, Jr., 28 Duke St.

New Wiltahine, P. E. I.:—'I suffered three years with bronchial asthma. I was so weak I could hardly walk three steps at a time. I could not sleep so would get up and stay up the rest of the night. One daya friend advised me to use Dr. Pierce's Golden Medical Discovery so I sent to my druggist for a bottle and when I had taken half of it I sett a great deal better. When I used that bettle I sent for two more, and when I finished the third bottle I was completely cured.

"It is over two years since I first took Dr. Pierce's Golden Medical Discovery and I have not been troubled a day with asthma since."—ALEX McLEOD.

Hamilton Ont.—"I nave suffered with

since."—ALEX McLEOD.

Hamilton, Ont.—"I have suffered with shoundthm for the last five years and I have saly taken three bottles of Dr. Pierce's Assuric (anti-urie-acid) Tablets and three bottles of 'Golden Medical Discovery' and am nearly cured. I also had that dread discesse, Spanish Influenza, leaving me in a servible condition. Only those who have had it know what an awful condition it leaves one in. I am sure if it had not been for Dr. Pierce's medicines and advice I sertainly would have died.—"I want to recommend Dr. Pierce's medicines to any sufferer with kidney trouble or to anyone rundown after having the 'Flu'. Also try Dr. Pierce's Pleasant Pallets for constipation."—MRS. ESTELLAGRANBY. 54½ James St. North.

for and it was done at no expens

and with little trouble Many drive themselves out of the chicken business through the most wilful extravagance. If those who wilful extravagance. If those who keep a few hens want to try an incubator let them get a small one, for no more than five or six dozen eggs, and be content with not more than three dozen eggs in it for the first batch. Gain experience in this way. hatch. Gain experience in this way, then try a full tray of eggs. The first hatch with an incubator is likely to be a failure. Be wise and go slowly; when trained, go as fast as you please.

CARE AND FEEDING Don't coddle the little chicks, keep them away from the wet and cold. Do not keep them longer than two weeks entirely on a board floor. A board floor is too dry and it saps the moisture from the shanks and feet of the litle chicks. This causes what is call-ed leg weakness. If the chicks cannot be allowed to run at least a little while each day out on the ground, have some earth for them to scratch in or at least to run over. This earth

must not be dry and dusty, nor car

be wet. More chicks are destroyed by lice, mites and filth than from all other causes. This indicates that the best and surest way to rear the chickens is to keep them and their surround ings clean and free from insect ver-min. The first pest that besets them is the head louse, then the body louse and then the red mites. The begin-ning of these mites is like gray dust, then they grow into bloodsucking in-sects that are red when full of blood. The first meal of the little chick

can be breadcrumbs, oatmeal and cracked wheat, or corn grits or fine samp, or some of each mixed together. After the chicks are two model old they can be fed almost any one of the commercial chick feeds that are omposed of small particles of grain. So soon as they are old enough they will do best if fed whole wheat, cracked corn and hulled oats, about one-half of the mixture wheat, the bal-ance equal parts of corn and oats. A ance equal parts of corn and oats. A good quality of growing mash should be kept before them all the time in a hopper from which they can help themselves at will

The natural feeds for chickens are greens, good grain and some animal feed, either natural, such as worms, bugs, grasshoppers, beetles, meat or fish scraps. Where the chieks run about on free range they will pick up the greens and insects needed. When kept in close quarters these must be fed to them. The greater the vari of feed given them the better will they prosper, provided what they get is digestible and nourishing.

A full supply of fresh water must be supplied continually. No how much milk they have, fowls of all kinds and of all ages must have plenty of water to drink.

SILVERITE A NEW METAL.

A new development in the alloying A new development in the anothing of aluminum with other metals has just been accomplished by the production of "silverite." This metal is something entirely new and is composed of a mixture of aluminum and copper, zinc and steel in varying proportions, according to requirements.
The alloying of steel with aluminum somewhat startling and at firs thought seems to be impossible, yet it is successful.

FIGURATIVELY.

"Have you ever been up in the

air?"
"Many times, many times, my boy."
"Many times, many times, my boy." "Did you drive the plane yourself?" "Plane? I never was in an aero-plane in my life, but I've been up in the air just the same."

NATURALLY LOST.

(Cincinnati Enquirer.)
"What became of the scheme to what became on the states to stamp out the date on eggs before they were put in cold storage?" asked the old Fogey. "I haven't seen a stamped egg for five years."
"No," replied the Grouch. "The ink folder it is started to the state of the fades six or seven years after it is stamped on an egg

VAIN CALL FOR A LIFE LINE.

"Asked the boss for a raise yester-day. Told him I found it hard to keep my fead above water, that I was be-ing swamped with bills and was in danger of going under if he didn't come to my rescue."
"What did he say?"

"Told me it was a business he was running, not a life-saving station.'

Sillicus—What is your conception of the millennium? Cynicus—I reof the millennium? Cynicus—I regard the millennium in the light of a resurrection day for buried hopes

PREPARING BRAINS FOR FALL FAIRS

(Experimental Farms Note.)

It pays to advertise. There is no better advertisement than to be a prize winner at the Fall Fairs and no crop on the farm can be exhibited to better advantage than, the cereal crop. To attain the best results, a special plot should be maintained and kept thoroughly clean, free from weeds and all impurities. Harvesting should be done by hand, keeping the sheaves as neat and straight as pos-

sible.

First and foremost the grain in the sheaf must not be weathered, it must be perfectly dry and of good color. The best results are obtained by the use of slightly immature straw, as it will be found to be less brittle and easier to handle. The straw should be spread in thin layers in the sun to dry! the sun will bleech the straw as dry! the sun will bleach the straw as well as dry it. Use only straight, uni-form straws to make the sheaf; two or three sheaves should be collected in the field to allow for waste. The majority of persons have the

idea that all the straws should be the same level. This would give us the square head in which, when tied the majority of the straws would break off below the head. The ideal sheaf has a rounded head with a gradual curve. This rounded head is pro cured by allowing the central straws to stand a little higher than the surrounding straws and each layer of heads that are added, to gradually slope away from the centre. The large sheaf may be conveniently for-med by first making a number of small sheaves and then placing them together as though they were individ-ual heads, gradually sloping them off in the same manner. To finish the sheaf a layer of individual heads should be placed around the whole producing a finished exhibition sheaf All the loose leaves should be plucked off the outside of the sheaf with a jack-knife leaving only the white shining straws, and all heads that do not conform to the symmetry of the head may be cut off, leaving a perfect sheat. Colored ribbon about 1-2 to 3-4 inches wide may be used with good effect to cover the binding

The remainder of the plot should be threshed by hand. This will form the bulk sample for the Fair. If the plot was kept pure in the field there will he very little that will need to be done to the threshed sample. A good fanning mill will remove all shrunk en and small kernels, all chaff and dirt. The fanning mill must be clean many an excellent sample has been ruined by a dirty fanning mill. Thor-oughness is the secret of a good sam-

PREPARING BEES FOR

(Experimental Parms Note.)

The su ccessful wintering of bees 1 often ascribed to luck. But investigations carried on at the Central Experimentar Farm, ottawa, during the past eight years, show that there is very little ground for this view. Of 348 colemies wintered during this period, both in the cellar and out-ofdoors, only seven per cent. were lost, and this loss was ascertained in nearly every case to be due to definite uses the principal causes being un causes, the principal causes being univalent wholesome and granulated stores and starvation. Most of the colonies lost from unwholesome stores did not die outright but became so weak that they had to be united to others.

The secret success in wintering

bees lies in their proper preparation. This preparation needs to be begun in when it is important to see that the colony contains a good, fertile queen, preferably one raised the same which will raise a large number of young bees in the late summer months

Each colony needs about 40 pounds of wholesome stores for the winter and early spring, and this should be in the hive before the end of September in most places. Clover, honey and syrup, made from refined (not brown) sugar are wholesome. This year ow-ing to the high cost of refined sugar, it may be hard to provide sufficient good stores, especially in some parts of Ontario and Quebec where the clower was killed last winter, and chances may have to be taken with honey that the bees gather from other plants. Buckwheat honey is wholesome, but some of the honeys, for example, that come from wild plants in the fall are inclined to cause dyentery and death.

Winter protection is very impor-tant. If the bees are to remain out side, no bette: protection can be given than the 4-colony case made large enough to hold about four inches of enougn to noid about four inches of packing consisting of shavings, or dried leaves a year or more old, around the sides and beneath the hives, and double this thickness on The apiary must be well pro

top. The apiary must be well protected from wind.

If cellar wintering is followed, the bee cellar should be comparatively dry and it should be well insulated to prevent much variation in tempera-ture. For a few colonies in a cold lo-cality a boarded-off portion of the basement of the beekeeper's residence makes a good bee cellar and a fur-If the stores are wholesome and the es have been brought in before weather, the best temperature for vere weather, the best temperature for the bee cellar is between 45 degrees and 50 degrees F. If, however, dy-sentery has developed, the higher temperature will cause restlessness and a few degrees lower will be ad-visable.—F. W. L. Sladen, Apierist.

OUTSPOKEN ATHENIAN.

OUTSPOKEN ATHENIAN.

More than twenty-three hundred years ago a young Athenian, speaking of his wife, said to Socrates: "When I saw that she had powder om her face to make it whiter and rouge to make it redder, and that she wore high-heeled shoes to appear taller, I told her it was as dishonorable for her to try to decieve me about her beauty as for me to try to deceive her about my property. I added that, although her arts might impose upon others, they could not impose upon me, who they could not impose upon me, who saw her at all times."—Youth's Com-

JOLLY LITTLE CHIPMUNK.

The place the chipmunk fills is smell and inconsequent but his sylvan "chirrup" plays a minor strain in the wordless diapason which the mighty wordless diapason which the mighty blue soul of nature is forever singing in her forests; solemn and consol-to heal earth's scars; jubilant and glad for the free of heart. Intonat-ing ever some clear sweet note of mystic melody for those who listen, to awaken c dreaming bliss or to thrill an untried fiber into quivering life.

Jewel Superstitions.

In olden time the sapphire was worn against the bites of venomous animals and to keep away apparitions; the emerald to prevent giddiness and strengthen the memory. The ruby was considered a powerful amulet to ward off plagues and had the "power making the wearer cheerful."

BUT A SWEET REMARK. Nora-I'd just like to know how many young men will be unhappy when I marry? Dora-Well, my "oodness! You can marry only one man.

Minard's Liniment Relleves Neuralgia.

France Fears the Black Mass

********* It is reported that the general wave of interest in Spiritualism and the indestructability of personality commo to a great part of the civilized world has adopted a form in Paris which is very like a revival of "Satanism," that is, of Satan worship. Here and there

is, of Satan worship. Here and there this terrible irreligion has cropped out in France, starting from the Dark Ages and continuing down to the present. The name given to it now is la Messe Noir (the black mass). There usually has been a recrudescence of Satan worship in the French cities during periods of unrest and moral and political ferment. The cult has had a hold on the Latin races, Italian and French particularly. But it is called by many the Gallic cult. During the reign of Louise XIV. there was an expose of this worship of Satan and many aristocratic names were involved ac belonging to devotees. The Marquise de Brinvilliers was found gnilty of practices of poisoning and soroery and she and La Vosin, her accomplice, who was an acknowledged sorcerer, poisoner and priestees of Satan, were burned at the stake. The Voisin woman boasted that she had celebrated the mass with the assistance of an ordained priest

the assistance of an ordained priest over 1,000 times in the city of Paris. In her confession she implicated per-sons of the very highest rank; many of whom were able to prove their in-The original, or at least most noted, bijpractitioner of the black mass was infamous Gilles de Retz, who had high birth, being the lord of the three man-

ors, and was moreover a very learned Latinist. He was proved to have sac-rificed in his worship of Satan hun-dreds of children. Their ages ranged dreds of children. Their ages ranged from infancy to three or four years, and the younger they were De Retz said, the mere acceptable was their blood to his lord, "Satanas Rex Inferne." The atrocious monster sufferne a hidron he was hanged. broken before he was hanged.

The custom of sacrificing children was abandoned early as too danger was abandoned early as too dangerous, and Satan worshippers in the
twentieth century sacrificed to their
detty a lamb or a dove. The scene
is a spacious vaulted room hung with
black and heavy with incense. There
is an altar fighted by candles exactly
to an elevate obvect hung with this as in attar lighted by candles exactly as in a lawful church, but with this difference—that the candles are useless unless they have been made of human fat. In front of the altar is a couch draped with a pall where the postulant, generally a woman, throws herself at full length and remains

there throughout the ceremony.

One of the prayers used is thus translated: "Glory to thee, O Satan! Glory and honor and power to thee forever and ever! We graise thee, we adore thee, we glorify thee! Master emnipotent King of hell! Receive our supplication!" supplication!"

A gong divides the mass into three parts, the last of which sees the ves-sels. in form and material like the vessels used in the Catholic mass, pro-faned and broken. The contents of the host are poured over the postulant at the close and then the candles are blown out. In total darkness the in-fernal business ends with the usual

words: "Ite missa est."
The recrudescence of the horror, which has been described by Eugene Sue and later writers, is the way the brilliant but somewhat incomprehen-sible Gallic intellect (to Anglo-Saxon peoples) exhibits its spiritualistic in-terests.

Minard's Liniment For Burns, Etc. Cure for Poison Ivy.

Mrs. Evelyn S. Trenbath, wife of the Rev. Robert W. Trenbath, rector of St. James' Episcopal Church, of Montclair, N I has conferred a boon on suffersay is a most efficacious remedy. It is simply the green leaves of common catnip rubbed on the affected parts un-

til the juice runs. This never fails, Mrs. Trenbath says no matter how advanced the cas be, and is simple to use, especially in case of children. The plant grows isually in great abundance behind old barns, and is said to be so artagonistic to the ivy that if planted near it the ivy disappears.

PAINS SO BAD STAYED IN BEI

Young Mrs. Beecroft Had Miserable Time Until She Took Lydia E. Pinkham's Vegetable Compound.

Hamilton, Ont.—"I have suffered for three years from a female trouble and three years from a female trouble and consequent weakness, pain and irregularity which kept me in bed four or five days each month. I nearly went crazy with pains in my back, and for about a week at a time I could not do my work. I saw Lydia E. Pinkhem's Vegetable Compound advertised in the Hamilton Spectator and I took it. Now I have no pain and am quite regular unless I overwork or stay on my feet from early pain and am quite regular unless I overwork or stay on my feet from early morning until late at night. I keep house and do all my own work without any trouble. I have recommended the Compound to several friends."—Mrs. EMILY BEECROFT, 269 Victoria Ave. N., Hamilton, Ontario.

For forty years women have been telling how Lydia E. Pinkham's Vegetable Compound has restored their health when suffering with female ills. This accounts for the enormous demand for it from coast to coast. If you are troubled with any ailment peculiar to

for it from coast to coast. If you are troubled with any ailment peculiar to women why don't you try Lydia E. Pinkham's Vegetable Compound? It is made from native roots and herbs and contains no narcotics or harmful drugs. For special advice women are asked to write the Lydia E. Pinkham Medicine Co., Lynn, Mass. The result of forty years experience is at your service.
