Diseases, the National Association for the Prevention of Tuberculosis, the National Clean Milk Society and the various societies leagued together in the Central Council of Child Welfare. Closely akin is the health work of the Boy Scouts movement. All this educational enterprise and organisation form an invaluable and integral part of national Preventive Medicine.

* * * * *

"The Practice of Hygiene; The Teaching of Mothercraft; Physical Education; Open Air Education: These four methods of education in hygiene are submitted for the consideration of local authorities. They are, of course, only illustrations, but in principle they are widely applicable—to adults as well as children. One thing is certain, no substantial advance can be made in this country in the practice of Preventive Medicine apart from the will of the people, which can only be guided rightly by knowledge and practice in hygiene. We have witnessed a nation organized for war, we require a nation organized for the purpose of national health."

From a Memorandum by
SIR GEORGE NEWMAN,
Chief Medical Officer of the Ministry of Health of
Great Britain.
