

## TABLE OF CONTENTS.

	Page.
INTRODUCTORY NOTE . . . . .	5
<b>§ 1.—INVESTIGATION OF ERRORS OF LONGITUDE.</b>	
Eviction . . . . .	8
Variation . . . . .	8
Mean error of tabular right ascension at different times of day . . . . .	9
Value of solar parallax employed . . . . .	9
List of corrections to "Argument Fondamental" . . . . .	10
General ideas which form the basis of this investigation . . . . .	11
Differential coefficients . . . . .	12
Mean apparent error of Hansen's Tables in right ascension . . . . .	12
Sudden apparent alteration in mean motion of the moon . . . . .	13
Corrections for limb and observatory to render observations strictly comparable . . . . .	13
Mean outstanding tabular error of the moon in longitude . . . . .	13
Corrections of short period actually applied . . . . .	14
Equation connecting errors of moon's tabular right ascension with errors of lunar elements . . . . .	16
Sums of errors of moon's corrected right ascension given by observations at Greenwich and Washington . . . . .	17
Normal equations for determining $M$ , $b$ , and $k$ by least squares . . . . .	20
Values of outstanding errors of lunar elements for each year . . . . .	20
Apparent periodic character of the corrections to the eccentricity and perigee . . . . .	20
Formula for the new inequality of longitude . . . . .	24
Discussion of Greenwich observations of the moon from 1847 to 1858 . . . . .	24
Sums of residual errors . . . . .	26
Corrections to eccentricity, longitude of perigee, and moon's longitude . . . . .	29
<b>§ 2.—INVESTIGATION OF POLAR DISTANCE AND LATITUDE.</b>	
Corrections to declination depending on errors of longitude . . . . .	32
Constant corrections to reduce declinations to same fundamental standard . . . . .	32
Sums of errors of moon's corrected declination, given by observations at Greenwich and Washington . . . . .	34
Correction to inclination of orbit and longitude of node . . . . .	36
<b>§ 3.—AUXILIARY TABLES FOR FACILITATING THE COMPUTATION OF THE CORRECTIONS TO HANSEN'S "TABLES DE LA LUNE".</b>	
Summary of corrections to mean and true longitude of the moon from Hansen's Tables . . . . .	37
Explanation of tables for applying these corrections . . . . .	37
Example of the use of the tables . . . . .	40
Corrections to the Ephemeris derived from Hansen's Tables of the Moon, for Greenwich mean noon of each day, from 1874, September 1, to 1875, January 31 . . . . .	41
Tables I, II, III, the arguments $g$ , $D$ , $A$ , $B$ , $u$ . . . . .	45
Tables IV, V, VI, secular and empirical terms . . . . .	46
Table VII, terms of mean longitude . . . . .	47
Table VIII, terms of true longitude . . . . .	48
Tables IX, X, factors for reduction to longitude in orbit; and for correction of latitude and reduction to ecliptic longitude . . . . .	50
Table XI, factors for converting small changes of longitude and latitude into changes of right ascension and declination . . . . .	51
