

No. 74. Awl made from bird's bone. Village site No. 5.
 No. 75. Partially sawed bone, showing marks of workmanship. Village site No. 5.

No. 86. Hollow bone. Bexley.

No. 242. Horse-shoe shaped scraper.

No. 248. Small circular scraper.

Nos. 243, 244. Two arrowheads. Colorado.

Nos. 246—247. Three diminutive arrowheads.

These last seven implements are from Colorado and are remarkable for their finish, symmetry and material.

Nos. 130, 181, 182, 184, 188, 201, 238, 239, are arrowheads from the head of the portage, Balsam Lake.

Nos. 240, 241, 249. Scrapers from the same place.

No. 25. Implement roughly blocked out. From the same place.

This spot is the only place where arrowheads, etc., of flint are to be found, the inhabitants probably using bone and horn to a large extent.

Now comes a series of chipped flint implements from Texas, numbering 68.

This series contains awls, fish-jiggers, arrowheads of common types, spear heads, rudely worked paleoliths, scrapers, flakes, knives and other implements.

All are chipped to a cutting or shaping edge, no matter what shape they are.

The specimens of pottery are from the three mentioned village sites, and are of the usual patterns incidental to this locality, of which very good representations can be seen on pages 26, 27, 28, Fourth Annual Report Canadian Institute. These ought to be kept separate for purposes of comparison.

No. 12 is a knife, modern, taken from a grave at Edmonton, N.W.T., with pipe No. 19.

No. 20 is a mortar of a size suitable for being carried, found in 1891, on Grand Island, Balsam Lake. Size of depression seven inches by eight inches, by one inch in depth. The block of stone which contains the mortar is of a flat, irregular, four-sided shape, eighteen by eight inches, three and a half inches deep. Was probably selected and broken off a larger stone, on account of its being composed of a slab of black material lying on a slab of reddish-grey material, the black or upper containing the mortar and being smaller than the base. The rest of the upper surface is worn flat and polished, perhaps by the use of grinding tools.
