**NEW YORK.**

H. C. Becker, broker, Bank of Commerce building, received the following by private wire from Bartlett, Frazier & Carrington today:

New York, Aug. 22.—Noon.—There is a slightly better sentiment today as far as activity goes there is no betterment worth mentioning. The prospects, Secretary Shaw will be able to hold 100,000 in reserve for a protective stringency and will be received. Of course the question of the legitimacy of the methods by which he has accomplished this is suggested in the Washington dispatch and excited discussion. It is well to take the ground, however, that he knows just what he is about. The opening market was decidedly dull, later became somewhat better and the strength of the copper stocks was the stimulating feature. It is evident that some developments affecting copper, including St. Paul and Union Pacific were perhaps the most active features of the list. Some strength was evidenced in rubber goods and in the realty construction, a little activity developed which indicated for a time a heavier tone. The general list fluctuated fractionally and without special feature. The market is entirely professional, sales to noon, 116,000.

H. C. Becker, broker, Bank of Commerce building, received the following by private wire from Bartlett, Frazier & Carrington yesterday:

Had Delightful Boat Trip and Visited Parke Davis.

Party Was Banqueted at Russell House in Evening.

Special Train Took Them West in Fast Time—Day Was Very Pleasantly Spent.

At 3 o'clock this morning there awoke from a special train at the Grand Trunk depot a party of from 300 to 400 weary excursionists. They were the members of the Canadian Medical Association party, and they had just arrived from Detroit and Walkerville, where they spent yesterday as the guests of Parke Davis & Co., the well known manufacturers of chemists and druggists supplies.

Their first object was to see the premises of the medical men in London, on the occasion of their annual meeting, to visit themselves of the opportunity of being their hosts for the day and showing them through the establishment, which to the profession is known the continent over the ocean.

They chartered a special Grand Trunk train, and at 6 o'clock in the morning the doctors started on their trip. It was a merry party, which had a merry outing in the face of unfavorable weather conditions. The rain was falling when the train pulled out of London depot in the morning. It was still falling when the train arrived at Walkerville, two and a half hours later, and through the entire day it continued to fall, sometimes lightly, but generally in heavy showers. While Parke Davis & Co. could not control the weather, they showed that in the face of what would generally dampen the enthusiasm of a crowd of excursionists, they were capable of making them enjoy their trip. In the first place, the company chartered a special train of first class coaches, and with the conductor Mauley and Engineer Cleary, of this city, a run to Walkerville was made in good time. The train was of seven coaches, and at intervals along the line a mile a minute was reached.

**DELIGHTFULLY ENTERTAINED.**

On the arrival at Walkerville the doctors and their ladies were taken to the manufactory of Parke Davis & Co., where they were shown many interesting processes of manufacturing, and the doctors were shown the various machines and apparatus used in the manufacture of the various medicines.

From there the excursionists were taken on board the excursion boat, and for three and a half hours they moved up and down the river, going as far up as the St. Clair falls, and down several miles south of Detroit. The band of the Twenty-first (Essex) Regiment was on board, and furnished music. Lunch was also served on the boat. At 3 o'clock the party returned to the docks of the company in Detroit, and for the next two and a half hours the visitors were taken through the immense establishment, in which from 1,800 to 2,000 men, girls and boys are employed. There was much to see, and that was interesting. The manufacture of the scores of different preparations made by the firm was witnessed, but most interesting section to the medical men was the biological building. It was there that the toxins of the company are manufactured, and as there have been great discoveries in this line during recent years the attraction for the doctors was doubly great. Connected with the biological section were found immense stables and barns, all of brick, with concrete floors, in which there were herds of horses, cattle, dogs, chickens, rabbits and guinea pigs. Everywhere the greatest cleanliness prevailed, and in more than one department the employees were attired in white. In two rooms in the building, tests of the effects of certain drugs upon the various animals were being made, and an expert was engaged taking from a cow what would be placed on the market in the form of vaccines. Interesting experiments were being made elsewhere, and explanations of the work carried on were given. The horses found in the stables were all used to procure the anti-toxins which during the past few years have done so much to reduce the death rate from diphtheria. The chickens, rabbits, dogs and guinea pigs were all to be used for experimental purposes. The trip through the biological section was a most interesting one, and the doctors were enabled to see the work of the firm more fully than they had ever before done what the firm was doing in the interests of science.

A trolley ride of two hours was the next thing on the programme, and the outing was concluded with a banquet at the Russell House. The function was conducted on a most elaborate scale, and was an evidence of the liberality of the firm. The menu provided was all that could be desired, and was served in faultless style. The large dining-room was decorated with the chandeliers and walls, which were hung also with Stages and Struts, and the orchestra furnished the music, and before the guests departed they were favored with two solos by Mr. Harold Jarvis, of Detroit, who is a great favorite in many Canadian cities.

Major Maybury, of Detroit, was a guest at the banquet, and a letter of appreciation was presented to the medical men. The number of guests was so great that it became necessary to have a special train to take them to the hotel.

The excursionists were taken to the hotel, and for three and a half hours they moved up and down the river, going as far up as the St. Clair falls, and down several miles south of Detroit. The band of the Twenty-first (Essex) Regiment was on board, and furnished music. Lunch was also served on the boat.
