Children Cry FOR FLETCHER'S CASTORIA

APPLY AT ONCE

and Zam-Buk will soon take the pain out of a scald or burn. Mrs. Albert Smart of 279 Harrison Ave., Wingham, writes: "I upset a pan of boiling water over my arm and foot. As I was wearing slippers my foot was badly scalded. The pain was intense and almost immediately a huge blister formed, covering the top of my foot. "My husband got some Zam-Buk and applied it at once. The relief was really wonderful. Very soon the burning pain was ended and the inflammation drawn out, and continued applications completely healed the scald." Zam-Buk is also best for eczema, ulcers, bad legs, blood-poisoning and piles. All dealers, 50c. box.

Care of Pregnant Mares.

The pregnant mare should be well fed, and given regular exercise or light work. All food and water given should be of first-class quality. She should be given more grain than the non-pregnant mare, as she has her foetus to support. All possible care should be observed to avoid digestive derangements; hence everything consumed should be of good quality, easily digested, fed in proportion to the amount of work performed and at regular intervals. In addition to hay and oats, she should be given a few raw roots daily, and a feed of bran with a cupful of linseed meal, at least twice weekly.

Work that requires excessive muscular or respiratory effort should be avoided, so also should plunging through deep snow, slipping, etc. All nervous excitement should be avoided, so also should sights which frighten her, also offensive odors and operations. The use of drugs should not be tolerated, except upon the advice of a veterinarian. If necessary to give a purgative it is much safer to give raw linseed oil than aloes. Towards the end of pregnancy still greater care should be observed, and, while daily exercise up to the very last is advisable, it should be given more carefully and less of it when she becomes somewhat clumsy on account of size and weight.

While it is better to allow her a box stall when in the stable at all times, it is practically necessary after about the tenth month of gestation, as the period of gestation is irregular and the foal may be born, without any well-marked premonitory symptoms, any time after ten months. After the foal is born the mare should be given at least two weeks idleness, and if she can be allowed to run idle until weaning time, it will be all the better for both herself and foal.—J.H.R., Ontario Agricultural College, Guelph.

Vacant Lot Gardening.

The majority of the horticultural societies in this province have accomplished great things with their vacant lot propaganda. In the cities of Toronto and Ottawa alone many acres have been cultivated. Ottawa reports over 100 acres from which 50,000 bushels of valuable garden products have been garnered in first-class condition. Those interested in horticulture in Toronto through the Vacant Lot Gardening Association have also done a splendid work and in a large way.

The report issued by the superintendent, Mr. Geo. Baldwin, states: Number of lots under cultivation during 1917, 798, all well cultivated. Number of soldiers and soldiers' families working lots, 89. Average size of lots 3,000 square feet, all marked with sign board. Package of seeds provided 725, of which 607 were paid for. Several churches, hospitals, homes, girl guides, boy scouts included in lot holders. One lot looked after by a returned soldier who lost both his legs, another by a man with only one hand. The condition of both these lots would shame those who are not thus seriously handicapped. All gardens are inspected once a week and reminders sent to those who neglect their plots. The crops produced have a value of \$40,000 at a moderate estimate.—J. Lockie Wilson, Ontario Department of Agriculture, Toronto.

The loss in the Halifax disaster is now estimated at fifteen million dollars and the death toll will eventually reach 2000 when all are accounted for. The relief funds now reach about thirteen million dollars.

ATTACKED BY ASTHMA. The first fearful sensation is of suffocation, which hour by hour becomes more desperate and hopeless. To such a case the relief afforded by Dr. J. D. Kellogg's Asthma Remedy seems nothing less than miraculous. Its help is quickly apparent and soon the dreadful attack is mastered. The asthmatic who has found out the dependability of this sterling remedy will never be without it. It is sold everywhere.

AUCTIONED ON SHIPBOARD

Oldtime Custom Prevails Regarding Effects of Dead Sailors

Dead men's effects are sold at auction on the ship's deck by an old custom in the British navy. Prices out of all proportion to the value of goods are often realized for the man's heirs, especially if the late owner was popular with his shipmates.

Purely personal belongings, such as letters and photographs, are first taken out to be forwarded to the deceased's relatives. Then, as soon as official sanction is obtained, the rest of the articles are taken to a convenient part of the ship and offered for sale. The master-at-arms acts as auctioneer.

Bidders who have obtained the small articles from such an auction sometimes throw back their purchases for re-sale, until as many Jackies as feel inclined have had a chance of contributing something towards the assistance of the dead man's next of kin. Thus these kit sales become the lower deck's way of taking up a charitable collection.

The kit of a deserter is similarly sold by auction, the proceeds going to the National Treasury. But the whole outfit rarely fetches more than a few shillings, as many sailors regard the possession of articles formerly belonging to a deserter as undesirable, if not unlucky.

Factors of Value in Newspapers

(Editor and Publisher)

The Indianapolis News has made a canvass of one thousand readers, equally apportioned between its city and country circulation, to determine reader-preferences for features and factors of value in the paper.

As might have been anticipated, local news takes first place in the returns from the canvass. But the fact that both city and country readers place display advertising in second place in their estimates of what makes the paper valuable to them may cause some surprise to a few newspaper makers. Classified advertising is rated third by city readers and fifth by country readers, the latter placing a higher value upon market and weather reports.

The significant feature of this census is that advertising shares with local news the interest of readers. The inquiry made by the Indianapolis News would probably have similar results if made by any other representative, high-class newspaper. It indicates the real service performed for readers by the newspaper which carries a large volume of advertising.

Fire Logs of Newspapers

The following formula for the manufacture of fuel out of old newspapers, is claimed to have been used most successfully. If such is the case, it will prove a great boon to the citizens, especially in this year of scarce and dear coal, and it is well worth giving a trial. The logs will burn from an hour to an hour and a half in any fire-place or stove. The following is the formula: "Spread five sheets of newspaper folded once on the table, with folded ends towards you and begin to roll in a fairly tight roll. Before the first section is rolled completely, insert a second section; add newspapers until a roll two or three inches in diameter is made. Before finishing the last section of the roll, fold back all the sheets except the outside one so that only one sheet remains. Paste this around all, cut in three-inch lengths, saturate with coal oil for a moment. One or two will make a good fire.

Kaiser Bill No Amateur

The United States forest service has issued the following in the form of a "Forest Note":

"According to one German forestry journal, the kaiser in 1908 killed 1995 pieces of wild game, including 70 stags, elk and roebuck.

At that time he had slaughtered a total of 61,730 pieces of wild game, more than 4000 of which were stags, and was the leading exterminator of wild life in the world.

"As a slaughterer of men, women and children since 1914, however, he has been the foremost exterminator of human life in all history."

Are These YOUR SYMPTOMS?

Pains in the Back or Sides, Constant Headaches, Swollen Joints, Urinary Troubles, Stone or Gravel? You will find the remedy in the box below—

Hiding in Broad Daylight

A great advantage of the submarine lies in the fact that it is very inconspicuous. Even when running on the surface it projects but a few feet above the water-level, while the ships it hunts have masts that tower high above them, and, moreover, they usually pour out dense columns of smoke that blacken the sky to a great height. This smoke gives the U-boat commander his first hint that there is a ship about. He can see the smudge above the horizon when the boat that produces it is 30 miles or more away, down behind the curve of the earth. He can head for this smoke at top speed without fear of being seen. Presently he will see the masts of the vessel projecting above the horizon and then even the smoke stack, while he himself will be absolutely invisible to the man on the bridge of the ship, because he will be below that man's horizon. So the U-boat commander will have plenty of time to size up the speed and general direction of the ship's course and make his plans to intercept the vessel before the captain of that boat has the least inkling that there is a submarine about.

However, our merchantmen are now beginning to take precautions. They are beginning to use hard coal in the submarine-infested regions, so that a submarine must be within fifteen miles to see them. Some boats are even cutting down their masts and going away with their funnels to cut down their range of vision still further.

New York city has three women deputy sheriffs.

AN OIL WITHOUT ALCOHOL.—Some oils and many medicines have alcohol as a prominent ingredient. A judicious mingling of six essential oils compose the famous Dr. Thomas' Electric Oil, and there is no alcohol in it, so that its effects are lasting. There is no medicinal oil compounded that can equal this oil in its preventive and healing power.

Worth Thinking About

Every little bite makes a muckle. The second helping is getting to be bad form. There's lots of money to go round, but bacon, beef and wheat can't make the circuit. Fish may not be a brain food, but brainy men are eating more fish. Waste and want are twin sisters and neither is beautiful. Learn to control your own appetite before you try to control your neighbor's. A good citizen is known by the food he eats.

At Last

He had been going from church to church trying to find a congenial congregation, and finally on Christmas Eve he stepped into a little church just as the congregation read with the minister: "We have left undone those things which we ought to have done, and we have done those things which we ought not to have done." The man dropped into the nearest pew with a sigh of relief. "Thank goodness," he said, "I've found my crowd at last."

Rely on North America

Lord Rhondda says: "The Alliedarder is dangerously empty but we are carrying on in the resolute belief that we can rely on the people of North America to prevent our food supplies from becoming so diminished as to imperil the issue for which we are all fighting."

Meat Consumption on Decline

The consumption of beef and mutton in Britain during the last year of peace was 150,000 tons a month. During 1916-17 this amount has fallen to 120,000 tons per month. The total available supplies at present in sight for the current year are not more than 88,000 tons per month.

When Holloway's Corn Cure is applied to a corn or wart it kills the roots and the callosity comes out without injury to the flesh.

The possible water power resources of Canada have been officially estimated at 18,803,000 horsepower, while the developed power is put at 1,813,210 horsepower.

An attachment for hand plows has been invented which is intended to fit a man's body and enable him to add his weight to the force needed to push it through soil.

A patent has been granted an Illinois inventor for a violin almost cylindrical in shape, but which is said to possess the tone qualities of the usually formed instrument.

Natives of some portions of South America preserve potatoes for months and sometimes for years by alternately freezing and thawing them until all their moisture is removed.

A restaurant chair has been invented with a spring controlled shelf under the seat to hold a man's hat.
