Same Day—Purse \$—; double teams; one mile.
B L Burris' b m Mambrino Royal and blk g Bois D'Arc 1
W E Hughes' ch g Morgan and ch g Tim..... 2
Time—3:15.
Same Day—Purse \$300, running; two mile heats.

Billiards.

TRICKS THAT ARE VAIN.

Prior to Sexton's departure for St. Louis, Mo., on Nov. 22, a great deal of needless newspaper talk was indulged in, relative to a challenge, purporting to emanate from Sexton, offering to discount Cyrille Dior short games for small amounts. The plain, unvarnished facts of the case are cited below. Prior to the game at Tammany Hall, Nov. 13, an enthusiastic and warm friend of Sexton's offered to bet that Sexton, whether he won the championship match or not, could discount Cyrille Dior at the three-ball game, 200 points up, for \$25 a game, number of games unlimited. The only conditions following this challenge were that the games be played on a Colander table, and in the private room of the party making the challenge. In proof of the sincerity of the party who made this bet at *defa*, he had a new table set up and a new set of balls in close proximity on the night of the contest.
The maker of the above proposition on behalf of Sexton is a well-known, respectable man. He meant every word he said, had the utmost confidence in Sexton's skill and integrity, and was prepared to back his confidence with his money. It would have been well had the matter ended here. That it did not is regretted. Of late years it has been deemed unprofessional to make a professional match until the professors have been called together, and until the matter has been passed upon in solemn conclave. Here was an opportunity to obtain not only considerable gratuitous advertising, but also a chance to gather in a few of the shakels of the confiding public. Was it to be thrown away? Certainly not! Cyrille and Sexton at once put their "frisky brains" together, attended by their trusted confidants, Daly and Slosson. The whole thing was soon arranged. Slosson was to have at one for Chicago. Cyrille was to accept publicly, through the daily journals, and while Sexton was sitting by his side, a proposition which had been made to him and his friend in private. Then Sexton was to reply to Cyrille through the medium of the daily press, stating that he was in the eye of destruction for the Slosson proposition.

with Cyrille for an imaginary stake in New Orleans. Let Slosson, Cyrille and Daly have a three-handed tussle by themselves.—*Turf.*

Edward Kendall, ex-champion of Massachusetts, 1-1 on a come song at T by Pastors, New York.

The Blyth, Ont., council has refused to grant billiard licenses. The members of the Board were frightened by a clergyman and a few old women.

A remarkable game of billiards, as played via London, was finished in Paris, France, on the night of Nov. 23. One Pierre Carnot and Paul Pratt were the contestants, and Carnot is put down as the victor. The game was 2000 points up, for 4000 francs. Pratt did not finish the game until near the finish, when Carnot gained the lead and won. Pratt's scores were 312, 196, and 99, while those of Carnot were 270, 165, and 121. Score at last, 2000; Pratt, 1300. The winner is reported to have challenged any player in Europe for \$5,000, the number of points to be up in 12 or 15 games up.

A CANADIAN FORTIN. FRAINERS EXPERIENCE WITH BILLS.

CHATHAM, ONT., Nov. 18, 1877.
DEAR SPIRIT: On examination we find that the horse's mouth contains two or four molar teeth and to enable him to utilize them in masticating his food, they have been arranged in four different rows. Six teeth are on each side of the lower jaw, and a smaller number on each side of the upper jaw. The crowns of the upper molar teeth have a concave breadth in them, thus those on the lower jaw are in quantity the size of each upper row of teeth project over the outside of each lower row of teeth. Owing to this arrangement the teeth become worn in masticating the food, it seems to cause the superior parts of their crowns to assume a level form. This form causes a row of lower front teeth to have sharp points on their inner sides, and each row of upper front teeth to have a sharp edge on their inner sides, next to the cheeks. The crowns of the incisors are flattened and edged with a sharp edge of enamel, and have triangular deciduous points. These cause the edges to form the teeth to be very sharp and irregular, producing a great deal of attrition of the teeth.

quently cause the cheeks to become injured, forcing them in against the teeth. Into the large loops or rings in them, are inserted, from the fact that their upper edges project the cheeks in against the upper teeth, where a small loop or ring is not reached up high enough to cause the injury. A full time is given to the animal to allow the upper teeth to be liable to force the cheeks in against the edges of the upper front teeth, hence they may be injured. Owing to this fact most of the animal's work is done but one way, the front teeth, and that way constructed on the lower side of the mouth. It is one of the "mistakes" of the animal's mouth and Dexter etc. It is so that the horse's teeth are not properly used, and the animal's work is done in a way that is not profitable to the owner. The animal's teeth are not properly used, and the animal's work is done in a way that is not profitable to the owner. The animal's teeth are not properly used, and the animal's work is done in a way that is not profitable to the owner.
