

plan of treatment does not contemplate removal of bacilli from the spleen, intestinal wall and various tissues of the body, but does contemplate elimination of bacilli and poisons from the intestine, and of toxin from the body by way of the intestine."

A second example: I am made to say that I had never had a fatal hemorrhage, and that I had had but few perforations. What I did state, after pointing out that twenty per cent. of the mortality of typhoid fever had been attributed to perforation and hemorrhage, was that "in my own experience I had never had a fatal hemorrhage, and but few hemorrhages, nor had I had in all these years a single perforation."

I am sure you will agree with me that it is most unfortunate, when mistakes like the above occur, utterly false impressions are received by an immense number of readers, and it frequently happens that this impression remains, since many who have read the report will fail to notice the correction.

W. B. THISTLE.
