IN the year 1539, HUMPHRY GILBERT was born in the fine old Manor-house of Greenaway, near Dartmouth. He lost his father at an early age, and his mother married Mr. Raleigh, by whom she became the mother of the celebrated Sir Walter Raleigh. The manor-house in which Gilbert first saw the light commanded an enchanting view, being delightfully situated in front of a splendid bay, the waters of which almost reached to the steps of the hall-door, although within a stone's throw vessels of heavy burden could ride safely at anchor. Here, on lawn and beach, "many a time and oft" sported Humphry and his younger brother, Walter Raleigh. Here did the boys often listen to the wonderful stories of old navigators, who told them of that newly-discovered land which lay beyond that line of light which marks the marriage of the sun with the sea! How the lads must have yearned for a sight of the rolling rivers—the mighty mountains—the primeval forests—the lakes of ocean size—and the extent of plains so vast that no eye could reach their boundaries; all of which had existed from the beginning, and until now, unknown to the western world! How they must have wondered what manner of men inhabited that marvellous land; and how their hearts must have beat and their blood fired as they heard of the red-skinned man hunting down the buffalo and catching the wild horse. Wordsworth has written that "the Child is father of the Man"—and tales such as these no doubt had the effect of fixing the future career of the two young heroes. For a time the brothers must part. Humphry was sent to Eton, and afterwards to Oxford—and both at school and at college he acquitted himself most creditably. He then went, in a military character, to Ireland, where, for his services, he was knighted in 1570. Returning to England, he married a rich heiress, but lost the greater part of his fortune in a joint speculation with Sir Thomas Smith for converting iron into copper. Gilbert having exhibited, in his early life, a strong taste for mathematics, he now applied himself to the correction of mathematical instruments and naval sea-cards. These studies led him to ponder the question of a north-west passage to the New World, with visions of which his mind was continually filled, till he became

firmly impressed with the idea that the discovery of a new world would be most materially to the benefit of the Old World and the Old. To prove the practicability of his scheme, Sir Francis Walsingham communicated them to Queen Elizabeth, who saw the importance of that examination schemes, although many speculative, and at the same time with ridicule; but the great amount of candour too much admired.

In seeking to test the theory, Humphry undertook two voyages of fitting out the expedition, absorbed the remainder of his fortune, and sailed with a fleet of five ships in 1583, the enterprising of discovery. Newfoundland Humphry hoped to find a passage to the westward of England was the American coast was work a terrible storm, and a little fleet were wrecked. Squirrel, a 10-ton frigate, compelled, by the failure for England, which he for the voyage home was on record. Throughout of religion and duty in the officers who accompanied him, wrote its history. Gilbert's attitude in day

"Monday, the 9th of the frigate was near, but at that time recovery, the General, sitting in the cabin, cried out to us in the proach within hearing of sea as by land!" reiterate, seeming a soldier rescuer, testify that he was. Twelve o'clock, or not a-head of us in the General were thrown out, when lost the sight; and the General was cast away.

With such sentiments the brave Gilbert, on the in the prime of life, found on whose waters his life forth in the service of in whose cause he his brave comrades shared
