

You Can't Get Over The Fact

that Contractors and Engineers prefer a mixer which does **steady work at all times**—A Machine which goes on a job at the beginning and stays there till the end, turning out **large quantities of beautifully mixed concrete** every day and every hour it is wanted.

You wonder how such a simple looking machine as the "Smith" Mixer is able to produce such fine concrete. It certainly looks and is simple, but have you ever looked inside a "Smith" Drum and seen how the contents are turned over, cut away, lifted up and tumbled into a central mass many times a minute—

All this concrete is dumped in an instant.

If you want to find out how the "Smith" Mixer is stronger, more durable, quicker, and better at mixing than any other, go and look at one, then ask the contractor what he thinks.

2500 satisfied users all tell the same story—

The "SMITH" is the Best
