Send sketch, model or photo for free advice. **MARION & MARION, Experts.** New York, Life Building, Montreal, and Atlantic Building, Washington, D. C.

of the Bay of Fundy, at Weymouth Bridge, where there are good loading berths with eighteen feet of water. Weymouth Bridge is at present a lumber shipping port, and one of the principal stations on the line of the Dominion Atlantic Railway.

A new settlement, started by a party of gentlemen from the neighborhood of Marselles, France, and known as New France, is a few miles away and being connected with the tidal waters at the Bridge by means of a pole railway, on which steam locomotives are used.

The Nissiboo Pulp and Paper Company's railway will be operated by electric trolley system, run by water power. The directors of this new company are: Robert Mackay, Andrew F. Gault, James Crahern and R. Wilson-Smith, of Montreal; George Faulkner, S.F., of Halifax, N.S.; and Charles Burrill, of Weymouth, N.S. As stated a short time ago, the company have a capital of \$550,000, and financial arrangements have been completed.

Canadian piano factories are working at night now, in order to keep up with the demand, which is altogether unprecedented in the history of the piano trade of the Dominion. Higher wages are being paid in some departments of the work of piano-making, and this with the wages paid for overtime is giving the trade better wages than for many years. This department of Canadian trade is purely to supply a luxury to the Canadian public, and unusual activity in such a branch of industry indicates in a particularly satisfactory manner an amount of prosperity in the country to which the population of the Dominion is unaccustomed. The activity in the piano factories, however, is no more marked than it is in other branches of Canadian industry. The cotton mills of Canada are unusually active. Some have orders already on hand, which, without an order for another yard of goods, would keep them busy till next May. Orders for six months ahead show a condition of business our mill have never before experienced and it promises prosperity not only for the mills and a satisfactory condition of investments for those who have their money in mill stocks but steady employment for large numbers of working people, and a steady demand upon the retail merchants for the ordinary necessities of life. The condition of trade in the piano industry and the cotton industry is much the same in all departments of manufacturing in Canada to day, and the result is that we are entering the winter with fewer unemployed in the country than ever before. - The Globe.

The Luxfer Prism Company, Toronto, have recently taken possession of their new offices and warehouses at 98 and 100 King street west, and have now a building suitable in every way for the requirements of their extensive business. The prisms have been installed there, and the best testimonial to their efficiency is the brightness which permeates the whole building on even the darkest day. Luxfer prisms have become a necessity in connection with many buildings at the present day, and they are being used in the majority of large buildings now in course of erection, not only in Toronto but in the other cities of Canada and the United States. The business of the company is being widely extended, and the prisms are becoming more popular every day. Before many years are past it will be a unique building which has not been fitted with Luxfer prisms.
