

THE BLOOD IN DISEASE.

THE diagnosis of disease is rarely complete without a microscopic examination of the blood. Disturbance of the normal quality and quantity of the blood invariably affects the general health of the patient. The histological and chemical changes of the blood are an interesting study, as important in certain infectious diseases as bacteriological research.

The value of chalybeate medication may be accurately tested.

PEPTO-MANGAN (GUDE) when administered in indicated cases, and the results tested by the microscope, gives positive proof of its power to repair disturbed metabolism in all forms of blood poverty resulting from malnutrition, infectious diseases, surgical operations, etc., in fact, in all conditions where the blood has deteriorated.

PEPTO-MANGAN (GUDE) is ready for quick absorption and rapid infusion into the blood.

Prescribe an original bottle
and avoid substitution.

Samples and literature sent upon application.

BACTERIOLOGICAL WALL CHART FOR PHYSICIAN'S OFFICE.

One of our scientific, and artistically produced, bacteriological charts in colors, exhibiting 60 different pathogenic micro-organisms, will be mailed free to any regular medical practitioner, upon request, mentioning this journal.

This chart has received the highest praise from leading bacteriologists and pathologists, in this and other countries, not only for its scientific accuracy, but for the artistic and skillful manner in which it has been executed. It exhibits more illustrations of the different micro-organisms than can be found in any one text-book published.
