28	<i>dull and heavy.</i>	8 45	A. 15	11 45	1 15

or skill, neither does it consume time ; while its exercise causes every thing within its influence to be ready for action, agreeable to the eye, enduring in existence, and fitted to produce the required results without failure. There is one thing against which *practical* farmers should be cautioned, and that is, never to suffer their minds to run wild while they are bestowing such care on their farms. Science and agriculture must go hand-in-hand. Science will aid you much, and save you from much of that unremitting physical exertion sometimes complained of. Free yourselves from these prejudices against book-farming which many of you have read, and ponder well what you read, and it will not be long before your calling, which has been too much neglected from your own indifference, will rise to its true height. The time when a particular job is to be done, may not be of much importance to the manufacturer or mechanic, but to the farmer it is all important that he does almost every thing at the right time as he has to depend upon natural agents for success.
