31	Wed.	28	5 00	23	5	17 17	8 27				ness and severity.	

JANUARY.—We do not know much respecting the organization of "The Grangers," but understand them to be clubs or societies for the advancement of agricultural interests. Often meeting together it would well for them to devise methods of improvement for the mind as well as farm. Perhaps in these assemblies they secure the opportunity for discussing subjects of importance. It would be well to devise some plan for establishment of agricultural libraries, having on hand the most recent periodicals. Out of these many topics might be selected for readings and conversations. In this and other ways the experiences of members might be used in illustration of any new theories which may have been tested. With proper management these meetings would become very useful.
