

Company and has constructed a light railway 14 miles in length connecting their deposits with the Canadian Pacific railway at a point about 2 miles east of Grenville station.

In October 1916, Mr. A. Lannigan and Mr. J. Milway of Calumet discovered a deposit of magnesite on lot 13, range I, Harrington township, which has since been acquired and operated by the International Magnesite Company of Montreal.

Some development work on magnesite prospects has also been performed by Messrs. Boshart and Fitzsimmons during the past year and a few tons of magnesite shipped. The larger part of these shipments were derived from boulders, however, and not from the magnesite in place.
