TO PHYSICIANS.

New York August 18th, 1868.

Allow me to call your attention to my PREPARATION OF COMPOUND EXTRACT BUCHU my component parts are, BUCHU, LIME SAP, GUMBER, JUNIPER BERRIES.

It is more palatable than any now in use. BUCHU as prepared by Druggists, is of a dark color. It is a plant that emits its fragrance; the action of a stomachic delectation. Mine is the color of ingredients. The Buchu in my preparation predominates the smallest quantity of the other ingredients are added, to prevent fermentation; upon inspection it will be found not to be a mixture, as made in Pharmacies, nor is it a medicine; and therefore can be used in cases where fever or inflammation exists. In this you have the knowledge of the ingredients and the mode of preparation.

Hoping that you will favor it with a trial, and that your inspection it will meet with your approval. With the feeling of profound confidence.

I am, very respectfully,  
H. T. HELMBOLD  
Chemist and Druggist of 19 years experience

Helmbold's Fluid Extract Buchu

It is the most interesting feature of the paper referred to is the proposition to make St. John's, Newfoundland, instead of Halifax, Nova Scotia, the Eastern terminus of the Canadian Pacific Railway. Science has more effectively annihilated time and space on land than on water, in so far as at least as travel and commerce are concerned. The great object is, therefore, to reach the minimum of ocean travel, by taking the maximum of land travel. To this end it is proposed to connect Newfoundland with the mainland by means of a steam ferry, and make St. John's the terminus of the railway. It is ascertained that steamers constructed mainly with a view to speed can readily accomplish the voyage between Valparaiso and St. John's in one hundred hours. Thus the Atlantic ocean passage proper would be reduced from two hundred and sixty-four hours, as at present, to one hundred hours. Were this scheme carried out, it is claimed that the Canadian railway would not only possess enormous advantages over all others, but the Atlantic portion of it would export patronage from rival lines. Applying the same theory to the Pacific which has been applied to the Atlantic, the reader will at once see the absurdity of having the railway finally terminate on the Island, when it can be made to tap the American ocean commerce at Esquimaux, while yet that commerce is one hundred and fifty miles distant from their own terminus on Puget Sound. The Canadian line will be brought into more direct competition on the Pacific than it will on the Atlantic, and the truth is we cannot afford to waive the advantage which a terminus at Esquimaux would secure to it. Comparing the scheme for making the Eastern terminus of the railway on Newfoundland with that of making the Western terminus on Vancouver Island, it is encouraging to remark that the natural difficulties which present themselves in the way of the latter are infinitesimal indeed, when compared with those of the former. This is true, whether we take into account the bridging of the waters which separate Vancouver Island from the Continent, or crossing by means of a steam ferry between Burrard Inlet and Nanaimo. The reader will dis-
