

Mr. NAZARKIN (Union of Soviet Socialist Republics) (translated from Russian):

Today the Soviet delegation would like to share some views regarding the progress of negotiations on the prohibition of chemical weapons. It is our understanding that at present all participants in this forum unanimously consider these negotiations the most promising direction in the work of the Conference on Disarmament. The position of the Soviet Union and the other

(Cont'd)

Secondly, verification remains a key component of every credible and solid arms control treaty. This is particularly true in the chemical weapons area. Verification is essentially a three-fold process: decision and design, production and stockpiling, and destruction. Verification provisions including routine monitoring of the relevant part of the chemical industry in an equitable but adequate way, and finally an appropriate regime for conventional arms, including processes and challenges inspections, states a concern that an examination of existing law in this regard is not sufficient to ensure that the verification system is clearly related to the effectiveness of the routine part of the verification system. A very important element of destruction and verification of non-nuclear arms is that it is not only a challenge to the state, but also a challenge to the international community. It is essential for an effective verification regime in this area to be based on a system of mutual confidence, which is a necessary condition for the successful implementation of the verification system. The verification system should be based on a system of mutual confidence, which is a necessary condition for the successful implementation of the verification system. The verification system should be based on a system of mutual confidence, which is a necessary condition for the successful implementation of the verification system.

I am particularly concerned that the verification system should be based on a system of mutual confidence, which is a necessary condition for the successful implementation of the verification system. The verification system should be based on a system of mutual confidence, which is a necessary condition for the successful implementation of the verification system. The verification system should be based on a system of mutual confidence, which is a necessary condition for the successful implementation of the verification system.

Recent efforts to reduce and stop the production of chemical weapons in the world have been made to align the urgency of our work to bring about a comprehensive and effectively verifiable convention. The chemical-weapon negotiations surely gained momentum this year, but we use the remaining two months of the summer session to the maximum, as well as the latter part of the year when the CD is not in formal session. Even if the CD is not in session between September and January, this should not prevent us from pursuing the work with vigor.
