* Commission on collections.

NOTE.—The statistical work on the Sault Ste. Marie Canal is paid for out of the appropriation for staff.

Mr. BERGERON. When were these men appointed ?

Mr. GRAHAM. Some of them are very old employees.

Mr. LALOR. Some of these are customs house officers as well as statistical officers. They must be paid from both departments.

Mr. GRAHAM. I do not know about the other departments, but I know we pay them these amounts for doing statistical work.

Mr. BERGERON. Some of them must have a salary from some other department, or they could not live on \$200 a year.

Mr. LANCASTER. Will the minister explain how some of these officers are paid by commission when the canals are free and no tolls collected ?

Mr. GRAHAM. The proper way to put it would be to say that they are paid on the basis of the tolls that would have been collected under the old system on the business that goes through the canals.

Mr. SAM. HUGHES. Is this Mr. Junkin at Fenelon Falls paid for statistical work in addition to his salary as lockmaster ?

Mr. GRAHAM. Is it the same man, W. P. Junkin ?

Mr. GRAHAM.

Mr. SAM. HUGHES. Yes, there is only one man like him in the world.

Mr. GRAHAM. He must be a good man.

Mr. SAM. HUGHES. He is not, but I will not discuss that now. The minister first stated that he was not paid as statistical officer and lockmaster as well, and now I want to know what rake off he gets for both jobs.

Mr. GRAHAM. It is not a rake-off.

Mr. SAM. HUGHES. Yes, he does not do anything.

Mr. GRAHAM. He must do something.

Mr. SAM. HUGHES. He does not, he should not be there an hour. I may tell the minister that when a boat comes along the people have to pass their own boat through, and he stands around giving impudence very often.

Mr. GRAHAM. He gets about \$25.

Mr. TAYLOR. I would like to ask the minister what duties are performed in connection with the Rideau canal by Mr. James Daley, statistical officer.

Mr. GRAHAM. I have explained that James Daley is one of the leading statistical officers in connection with the traffic of the
