

That apparatus is the Morency's apparatus, patented in Canada, the United States, England, France and Belgium, and is the result of two years study and constant experiment.

It is a scientific apparatus, which the most unskilled and ignorant may operate without any possibility of danger. Carelessness, neglect, omissions, errors may therefore occur without danger of any evil consequences.

Everything has been foreseen, and its operation, even by the most unskilled hand, is free from all danger of accident, and gives every guarantee of the most absolute safety.

From that point of view, the Morency's apparatus is certainly the least costly, because an apparatus which is not perfectly safe is always too dear, no matter how cheap may be its price.

The Canadian Fire Underwriters' Association, after a thorough study of this apparatus and after repeated trials, has shown the most complete confidence in its efficiency and perfect safety by granting, without any reserve, to the Canadian Acetylene Company authority to put it up in buildings insured against fire.

The following is the

CERTIFICATE OF THE CANADIAN FIRE UNDERWRITERS
ASSOCIATION.

Canadian Fire Underwriters Association.

Montreal, 4th February, 1898.

The Hon. P. Landry,

Manager of the Canadian Acetylene Company, Levis.

Dear Sir,

That is to certify that after examination by our Inspector the Morency's apparatus for the production of gas as manu-
