

## Dowden Potato Harvester

### Dowden Potato Digger

**T**HE Digger that works where other diggers fail—the digger that takes every potato out of stiff lands, clay, grass, mud, weeds and stones, as well as clean lands. One enthusiastic owner of a Dowden writes us about its perfect work in grass and weeds four to six feet tall. We have hundreds of such reports on file. Let us show them to you. In some crops the Dowden digger actually pays for itself in the potatoes it saves. Write for the Dowden Book. It will tell you how this machine is made so strong that a break need never be feared, and so simple that a boy can run it. Drop us a postal to-day. The book will come, so will our catalogue prices and full particulars.

## Deere Potato Diggers

### Shaker Digger with Fore Carriage

**S**TEEL beam.—High natural temper steel blade.—Provided with weed fender and gauge wheel.—The shaker Digger has a perfectly flat blade and will not cut the potatoes. The rod grating is hinged at the front and is given an up-and-down shaking motion by the sprocket wheel at the rear. This shakes the dirt off from the tubers and leaves them clean and whole on top of the ground. The weed fender is intended to clear away weeds and vines, preparing the way for the blade. The digger is shipped with gauge wheel and fender unless ordered without.

The Forecarriage, or double gauge wheel which straddles the row, insures steady running of the Digger. The wheels have an up-and-down as well as an in-and-out adjustment.

## BALING HAY IN A PROFITABLE WAY

Write for Booklet  
giving full description

## DAIN Pull Power

## Hay Press

Pull Power means that the plunger is drawn towards the horses—not pushed away from them. The step over is low down, which makes it easy for the horses. Capacity is therefore increased. Bales are delivered in front, and do not interfere with placing the Press in the most convenient position near the centre of the stack. Delivery of the bales in front keeps them out of the chaff and dirt and out of the way of the operator. Large Feed Opening makes the DAIN easy to feed. The Automatic Tucker insures neat, smooth, square-ended bales. The DAIN Hay Press being all steel, no difficulty is experienced by warping when exposed to the weather or swelling when in contact with damp hay. Steel Bed Reach connecting the power and press. Plunger Head and Draw Bar are steel. This also means, in addition to the above advantage, that its construction is such as will stand the heavy strain a Hay Press is subject to.

**The DAIN Hay Press possesses many advantages by way of Construction, Ease of Operation, Low Cost of Maintenance.**
