in construction, accuracy in tying, and ease of adjustment. Only two moving parts constitute the working mechanism. There is no straining or pulling of the twine, and perfect knotting is assured.

The cutter-bar makes short grain fall from the knife to the platform canvas without accumulating be tween the guards and platform.

The McCormick reel is one of the strongest and most effective ever placed on a binder. It offers a wide range of adjustment and successfully meets the conditions encountered in any field, whether the grain s tall or short-standing, down, or tangled. On 7 and 8-foot McCormick binders the reel support is on the outer end. It effectively prevents the reel from striking the end of the guards while the machine is

being operated on rough ground.

There are many other features and advantages of McCormick binders. The McCormick agent will tell you about them. He will tell you about the wonderil strength of each individual part and of the strength of the binder as a whole-of the skilled workmanship, backed by many years of experience, and of the responsibility of the manufacturers, insuring you the most perfect binder it is possible to produce.
