What Emma Goldman Discovered.

Emma Goldman, one of the world's most famous find the asylum for which her views had fitted parades, in which were shown the things labor the mule, so adding scads unto my wad. her, a place where constituted law and authority was doing; various processes of manufacture

She had spent her years working for just in Russia that she could not see or bring about Labor Day. in Britain or United States.

But when in Russia she found there was no Anarchist and a breaker-down of authority though she was, she came under the eye of an authority that wanted to know all about her, where she was going, what she wanted to do. She was hedged about with a restraint to which she had not been accustomed. She found that in Russia there was no freedom. She found it harder even to get out of the place

She escaped to Germany, a place where she time. would surely be welcome. With its socialists and clothes. revolutionaries she could live and be free to come and go. But even in Germany she lived by the up, a little harder work, a little nearer the time grace of a permit, and when it ran out she had when they will pass out finally into the world. to seek its renewal.

will open its doors to Emma Goldman, anarchist, agitator and disturber.

There is something deeper in this than the ances into which those who came later never mere adventures of Emma Goldman. We have seemed to be on the same footing. many who treat law and authority as though it were a force to be dodged and avoided rather than a factor to be respected and encouraged. that wherever they turn there are rules and regulations that must be observed, and if they do not comply with them they face trouble that is not of their own making.

This sort of reasoning leads to men coming The men and women of tomorrow are being together as communists, as sympathizers and trained. May God bless 'em. advocates of a form of government that will take a sponge and rub from our slate of authority all the things there written. They do not know is certain he could conduct a great orchestra tional. because he knows how to change needles and play the record on the other side.

However, I violent in its action that it can be detected at the atmosphere surrounding Mars, cannot be persuaded that the anonce, even by a layman.

Now murder by poisoning is the most crafty of crimes, and is generally resorted to by a criminal of some intelligence, who carefully plans the murder in every detail. Being crafty and in-It is not well that we should pass too lightly on the premier, but it does not remain there, telligent, he eschews the use of strychnine behow deadly strychnine is can be gathered from deepest schemes of anarchy. It has been her explanation; nor yet on the other political lights the statement made during the trial of Vaquier that sufficient could be bought for twopence to

It was a medical man, Dr. William Palmer, of This country with the effects of this poison, for it was was in 1855, and in those days little was known about strychnine. As a matter of fact, it had been discovered only 37 years before, and the twin sciences of medicine and pathology were not what they are today.

Palmer when he was put on trial for his life of the poison in Cook's body and there was only the fact that Palmer had purchased strychnine to there was no definite chemical evidence of strychnine in the dead man's system, Palmer was guilty, and he was eventually hanged.

There has never been any real doubt that the verdict was right, and if the analysts of 1855 had had the advantage of modern skill and appliances there would have been plenty of confirmatory evidence. Then, however, this kind of analysis was in its infancy, if even that, and no one would have credited that it would be possible, as t is now, to detect the presence of strychnine down to 1-5000 part of a grain.

Another doctor, Dr. Neill Cream, who was executed in 1892 for the murder of two or three women, killed his victims with strychnine, and six years later a young Cambridgeshire farmer The same people who make money by showing named Horsford was hanged for murdering his cousin by the same means. Since then there has been no really sensational case of strychnine poisoning until the murder at Byfleet last March.

Dr. Frank Crane

THE SPAN OF LIFE.

The span of life at best is very brief.

At most it includes but seventy or eighty years of activity; as the Meighen psalmist said: "The days of man are three score years and ten, yet, if by factories. At most it includes but seventy or eighty years of activity; as the reason of strength they be four score years, yet is it labor and sorrow." It is characteristic of men that they live as though they were eternal. They plan institutions as though they would exist forever and lend them-

I figured that for one short spell I'd go into selves, fictitiously, a span of life which they artificially create. Yet, after all, the difference between the most aged and the infant wh dies new-born, is not great. About all that can be done here is to set our nouse in order, if there be anything for which to set it in order, and, if

there be no future life, the most of us will be disappointed. The other day Mr. Alvey August Adee died at the age of eighty-three the oldest American diplomat.

And yet those who approach this age feel, more and more, the rapidity with which time elapses. In youth, time seems to be eternal, and the wich and a jug of tea would follow me unto motto of youth is that tomorrow "will be as this day and much more abundant.'

But, as we increase in age and feel the years slipping from us, there is borne in upon us a sense of the frailty and uncertainty of our days. We are made to feel, more and more, the brevity of life

The continuity of the human race depends very largely upon custom nd the hold of tradition. If one were to come back to France, for instance, after being away for a hundred years, he would not find the same people at all, yet they would be Frenchmen.

Everyone has felt, at some time or other, how strange it is that of all the people he sees about him, in one hundred years not one will continue, yet the earth will be as full as ever.

It is the human race that goes on from year to year and not the individual life. One by one we drop out, yet the race continues.

It is the genus in which nature seems to be most interested. While she ley, aged 55, who sustained a fracis careless of the single instance, she is only careful of the type. What tured arm and sprained wrist; Mrs. happens to the single soul we do not know, but there is persistent belief John McCallum, aged 55, injuries to in its continuance in another life. But what happens to the race we do head and face; Miss Clara McCallum, Barring untoward accidents, it will go on forever.

Julius Ceasar, forgetting that the people of that time have long ago disappeared and that the present is a new group. But the disappearance of the individual has been so gradual, and there

has been such a lapping over of one generation to the next, that we retain our consciousness of the integrity of humanity.
