

**Try it**—test it—see for yourself—that “St. Lawrence” Granulated” is as choice a sugar as money can buy.

Get a 100 pound bag—or even a 20 pound bag—and compare “St. Lawrence” with any other high-grade granulated sugar.

Note the pure white color of “St. Lawrence”—its uniform grain—its diamond-like sparkle—its matchless sweetness. These are the signs of quality.

And Prof. Hersey's analysis is the proof of purity—“99 99/100 to 100% of pure cane sugar with no impurities whatever”. Insist on having “ST. LAWRENCE GRANULATED” at your grocer's.

fact the consumers got little or no benefit from it. Some of the retailers secured a slight advantage, but there was a large loss that benefited nobody. A co-operative Selling Association would have given the consumers cheaper berries in a more satisfactory condition and the growers would have much better net returns.

### Wrapping Fruit

R. M. Wislaw, Victoria, B.C.

In the fruit-packing, grading and marketing there is continual progress. Almost all number one British Columbia apples are now wrapped. It is to be hoped that small independent shippers, as well as the large associations, will see the advantage of the practice, so that this season all our best fruit will go to the markets wrapped in paper.

The advantages of wrapping are as follows:—

One, wrapping gives a more finished appearance to the package. It presumes a high-grade article, so finding a ready sale and a steady market and a higher price:

Two, wrapping improves the keeping quality, preventing disease spreading from fruit to fruit:

Three, the paper serves as a cushion, preventing bruising, and so prolonging the life and improving the appearance:

Four, wrapping makes an elastic but firm pack, much less liable to shift, and much quicker to put up:

Five, it protects the fruit from changes in temperature and absorbs surplus moisture.

The cost of paper for wrapping is also saved by the weight of fruit which the paper displaces. Experienced packers do as quick or quicker work wrapping than without it. There is very little foundation for any objection to wrapping, save that there is quite a knack in it, which some packers seem unable to grasp.

The wrapping-paper most largely

### IHC Cream Separators Have Trouble-Proof Neck Bearings

**G**RANTING that a cream separator is a money making necessity on every farm where three or more cows are kept, there are two points to make sure of when you purchase your machine—close skimming and long life.

There is very little skimming difference between separators when they will give. The difference is due to design and mechanical construction. To take one example of mechanical efficiency

### IHC Cream Separators Dairymaid and Bluebell

have trouble proof, self aligning, bowl spindle bearings. The bowl spindle bearing or neck bearing is an extremely important part of the separator mechanism. Its business is to reduce to the lowest possible point the vibration of a heavy bowl whirling at the rate of 6,000 or more revolutions per minute. A rigid bearing in such a place is impossible. To make a flexible bearing capable of withstanding the terrific strain requires the most accurate balance of strength, firmness, and elasticity. In IHC cream separators this balance is acquired by the use of one spring. There is only one wearing part, a phosphor bronze bushing. The entire bearing is protected from dirt or milk by steel cases. There is but one adjustment and that easy to make.

Go to the IHC local agent who handles these machines and ask him to show you how successfully this bearing meets all the difficulties imposed upon it. He will also show you many other reasons why IHC cream separators, made in four sizes, are the best. Get catalogues and full information from him, or write the nearest branch house.
