

FOREWORD

This is the Second Edition of our Directory of Canadian Exporters of Garage, Service Centre and Bodyshop Equipment which was announced in the current departmental Global Automotive Aftermarket Strategy.

It covers all Canadian made automotive equipment normally used in garages, service centres and bodyshops to maintain, service and repair automotive vehicles. The equipment is available for export from the firms listed.

The opportunity to be included in this directory was offered to all Canadian manufacturers of Garage, Service Centre and Bodyshop Equipment known to us.

In order to make sure that the company presentations in this Directory would reflect the spirit of the individual approach to export marketing each manufacturer was asked to write its own.

By their maintaining, servicing and repairing some 45 different makes of automotive vehicles of various sizes, weights and types under different climatic conditions, Canadians have over time developed Garage, Service Centre and Bodyshop Equipment that will satisfy clients anywhere in the global marketplace.
