

smack
in the black!
when you squeeze
off with the

38 SPECIAL WADCUTTER

You still have to hold, aim and squeeze off correctly;
no load can do *that* for you. But this load *will*
help improve your scores, because its slightly lower
velocity and lighter bullet (146 grains) means
mild recoil and reduced "muzzle flip".

It was specially designed to provide a load
for target work up to 50 yards, which would
replace the harsher firing, higher powered,
38 special. These factors pay off
handsomely in both timed and rapid
fire matches. The sharp bullet
shoulder cuts a cleaner hole
for easier scoring too.
