## QUESTIONS AND ANSWERS. Miscellaneous.

### HAND-FEEDING PIGS.

I have some young pigs, a week old, that I have to feed by hand; have been giving them cows' milk, but they do not seem to be very thrifty. Could you tell me the best way to feed them? They always seem ready to eat, and I feed them every two or three hours, but there seems to be something else needed besides the milk.

SUBSCRIBER.

Ans.—We know of no feed better suited for feeding young pigs than sweet skim milk, fed lukewarm in small quantities often.

### TRESPASS ON SIDEROAD.

Between me and my neighbor there is an unopened sideroad. My neighbor has lifted his fence on his line, thereby compelling me to maintain the whole fence between us. He has also joined his cross fences to my sideroad fence. What steps can I take in regard to the matter? Ontario.

Ans.—We do not see that it is legally open to you to do more than to bring to the attention of your township council the fact that your neighbor is making use of the sideroad in the manner described.

### MUSHROOMS—HOW LONG TO CONTINUE THE CARBOLIC-ACID TREATMENT— BREEDING OF C. P. COLLINS.

1. How long will it be necessary to continue the carboic-acid treatment for cows failing to breed, as per your answer to my question of June 28th, 1906, Advocate?

2. Will mushroom spawn grow if planted in the open in an old pasture?

3. A horse called C. P. Collins, purporting to be a Standard-bred trotter, travelled here a number of years. If living, he would now be about 20 years old. Many here claim that he was not registered, and his breeding is in dispute. Could you state if he is registered, and give his breeding? R. H. M.

Ans.—1. It is not claimed that the carboic-acid prescription will cause a cow to conceive, but where there has been contagious abortion in the herd, or in the case of an individual cow, it is believed to be a healing and cleansing treatment, destroying disease germs, and a preventive of abortion. It is well to continue the treatment until after conception, and to renew it when the term of gestation has been about six months gone, as abortion is more liable to occur in the seventh month.

2. Sometimes they will, but conditions are seldom right for a crop.

3. We would advise writing the editor of the American Trotting Register, 355 Dearborn St., Chicago, for this information.

### RESEEDING OLD LAWN—SPLINT.

1. When is the best time to plow up a lawn, and sow lawn grass seed? What kind of seed should I sow? It is an old lawn, and quite weedy.

2. I have a colt that has a splint coming on each leg. How may I best remove them? H. A. B.

Ans.—1. You might plow it up now, work down a little, top-dress, and seed in spring. Since it is so weedy, however, a better plan would be to plow next June or July, work thoroughly, and seed in the early part of September. As for seed mixtures, Prof. Macoun, of Ottawa, recommends Kentucky blue grass and white clover. Park Commissioner Pearce, of London, Ont., has what he considers a better mixture. He got it from a Philadelphia park superintendent, and has used it a great deal with excellent results. It is equal parts timothy, Kentucky blue grass, fancy red top, English perennial rye grass and white clover. Sow at the rate of a pound per square rod, with nurse crop of German millet. For sandy soils, he has a special mixture of  $\frac{1}{2}$  part fancy red top,  $\frac{1}{4}$  Kentucky blue grass,  $\frac{1}{4}$  white clover,  $\frac{1}{4}$  red or creeping fescue, and  $\frac{1}{4}$  creeping bent.

2. Don't try to remove them. When the splints have been formed, lameness will likely cease, since it is caused merely by stretching of the periosteum during the process of development of the splint. If no lameness is evident, therefore, let well enough alone. If lame, give rest, reduce inflammation by bathing with hot water, and rub the parts thoroughly, but gently, with a leather-covered piece of wood once a day, 15 minutes at a time.

Remove the blemish and cure the lameness and have the part looking just as it did before the blemish came.

**Fleming's Spavin Cure (Liquid)** is a special remedy for soft and semi-solid blemishes—Bog Spavin, Thoroughpin, Splint, Curb, Capped Hock, etc. It is neither a liniment nor a simple blister, but a remedy unlike any other—doesn't irritate and can't be imitated. Easy to use, only a little required, and your money back if it ever fails.

**Fleming's Vest-Pocket**

**Veterinary Adviser**

describes and illustrates all kinds of blemishes, and gives you the information you ought to have before ordering or buying any kind of a remedy. Mailed free if you write.

**FLEMING BROS., Chemists,**

45 Church Street, Toronto, Ontario
