Unique Find in Ontario RESULT OF A TRAGIC COMBAT

In September and October during the rutting season, the hunter occasionally hears the sounds of a terrific combat between those giants of the forest, the bull moose. With their formidable antlers these creatures can snap a young birch tree like a piece of matchwood, and although it is only rarely that the bull moose will attack a man, if he does so, the man has little chance unless he is quick with his high powered rifle. The other day on St. Ignace Island, twenty-one miles south of Rossport, on the C. P. R., a pair of locked moose horns was found as the tragic record of such a combat. They had evidently been fighting when the animals became entangled and, unable to extricate each other, the two animals died there of starvation, their remains being licked clean by the bears who prowl around in the forests of Ontario.

Two tired artillery men asleep on the carriage as it goes along the road.

The locked antlers.

A full moose.
