

present year was the enormous amount of 1.400,000 pounds of cochineal! It sells in Guatamals at the rate of \$60 per 150 pounds, or one terico. The annual con-sumption of cochineal in the whole world is estimated at about 25,000 tericos, or 3,-750,000 pounds. Beside Guatamals, a considerable quantity of cochineal is culti-vated in Mexico, the Cansty Jalands and Java. Its price will always be subjected to much greater fluctuations than that of coffice, sugar or tobacco. nt year was the end

CHEESE AS A DIGESTER.

CHEESE AS A DIGESTER. As a digester, as some not appropriately call it, cheese—that which is decayed and mouldy being preferred by connoisseurs—is often eaten after dinner. The action which experience seems to have proved it to possess in aiding the digestion of what has previously been eaten, is both curious and interesting, and has had some light thrown upon it by recent chemical researe . When the curd of milk is exposed to the air in a moist state, for a few days, at a moderate temperature, it begins gradually to decay, to emit a disagreeable odor, and to ferment. When in this state, it possesses the property, in certain circumstances, of inducing a species of chemical change and fermentation in other moist substances with which it is mixed, or is brought into contact. It acts after the same manner as sour

which it is mixed, or is brought into contact. It acts after the same manner as sour leaven does when mixed with sweet dough. Now old and partially idecayed cheese acts in a similar way when introduced into the stomach. It causes chemical changes gradually to commence, among the particles of the food which has previously been caten, and thus facilitates the dissolution which necessarily preceded disaction. If it calls and this inclutes the dissourced which necessarily precedes digestion. It is only some kinds of cheese, however, which will effect this purpose. These are generally considered the best in which some kind of cheese mould has established itself. Hence cheese mould has established itself. Hence the mere eating of a morsel of cheese after dinner does not necessarily promote digest-ion. If too new, or of improper quality, it will only add to the quantity of food with which the stomach is already overloaded, and will have to wait its ture for digestion by the ordinary process.—Chemistry of Common Life.

INTERESTING DISCOVERY .--- The workmen

INTERESTING DISCOVERT.—The workment engaged in prolonging the Durham Terrace, (Quebec.) on the site of the old chateau or fort of St. Louis, lately discovered an in-teresting archaiological relie. In demolish-ing the old wall which separated the out-works of the fort from the garden attached two momental stones were found, in an angle of this wall, enclosing a copper plate, having engraved on it the following inscrip-tion in latin, which we translate. [Ip the year of our Lord, one thousand six hundred and ninety-three, in the reign of the most august, most invincible and most (light) the most excellent and nost illustrious Lord, Louis de Bunde, Count de Frontense, for the second time, Governor af all New France,—the rebellious inhabitants of New England, three years before, having been repulsed, routed and completely vanquished by him in attempting to besiege this town of Quebec, and threatening a renewal of the siege this same year,—has caused to be econstructed at the expense of the King.

ROYAL CONICAL FLOUR MILLS .--- This new mode of grinding wheat is making rapid progress both at home and abroad. The bill for the incorporation of the London company has passed its third reading, metent for Austria is sold for £30,000. and a splendid mill is now at work to Vienna. a splendid mill is now at work to Vienna. Six more are in course of preparation—one at Prague. In France Prince Murat is the president of the French company, and the Emporor has signified his intention of adopt-ing it for his army and navy. Prince Albert has shown it maked support, by accepting a model, and explaining it to his and her Majesty's royal visitors. The magistrates of Hampshire have built a mill-for the county prison at Winchester. Lord Pertinan has one on his estate near Blanford which grinds 84 bushels per how, against 24 by the ordinary mill. Messrs. Favit, at Wapping, are working two mills night-and day, and Mr. Dargan, the eminant Irishman, has declared that the restoration of the flour trude to Ireland by it is the dearest wish of his heart: FAST Box.—"Tommy my, son, what splendid mill is now at work in Vienna.

destingting mean control to an and the series of the four trade to Ireland by it is the degree yeards of enclosure are deviced to the cultivation of coelineal. The coelineat is a small insect found in vast multitudes on several species of cactus, in South America and Macro. They are gathered in pots, destroyed by means of artificiant heat, and the mass thus formed is the brilliant crimenon drug, sold by the spotter of the papers of that city, has changed in colouring tinctures and making carries. On the 100 yards spoken of, the yield the
