

THE BIG RENFREW CREAMERY

The contract for the furnishings awarded to Derbyshire & Co.—The Renfrew Creamery Company, under the management of Mr. A. A. Wright and a strong board of directors, are now constructing the largest creamery in Canada, if not in the world. It is 44 feet wide, 160 feet long, three stories high. Prof. Robertson, Dominion Dairy Commissioner, has been there several times, giving them ideas with regard to building, so that when it is completed, it will be the most complete and the most easily operated of any on the continent. The contract for the dairy apparatus was awarded on Saturday last to D Derbyshire & Co., of Brockville, in competition with nine large firms. The Brockville firm supplies the celebrated Imperial Russian Separator, vats, churns, butter-workers, and everything required by an up-to-date creamery. The furnishings will cost in the neighborhood of \$3,000. Operations will commence about December 1. The building is as nice as carpenters and money can make it. The boilers are 35 horse power and the engine 12 horse power. Two separators will be used for the present with more when the demand requires. Two large 400 gallon churns, one receiving vat of 500 gallons, two creamery vats of 300 gallons and one tempering vat of 250 gallons are named in the contract for the furnishings. The milk will be skimmed at four skimming stations and the cream sent on by rail to the central creamery. The above extract is from the Brockville Times of Oct. 30th. We may add that Mr. Bernatchez, Esq., Berthier (en bas); J. Augustus Hayes, Esq., Sheffington; R. H. Pope, Esq., M.P., Cookshiro; Lennoxville Creamery Co., and The Sawyerville Creamery Co., are all using the "Imperial Russian" Separator, supplied by Messrs. D. Derbyshire & Co.

MODERN METHODS

The Wind in Harness—The Age of Steel.—One of the developments of this progressive and wide awake age, is the perfecting of wind power machinery, by which this mysterious unseen but wonderful power, is successfully harnessed, and made to pump water and drive machinery. The most durable and effective of these Wind Mills are those made of steel, for the steel fans or sails can be made much wider than wooden slats, and have a decided curve which gives much greater power. Among the progressive and reliable firms making steel Wind Mills, for pumping and power purposes, in Canada is Gould, Shapley & Muir Co., Ltd., of Brantford. The Massey-Harris Co., Ltd., Montreal, are agents for these Steel Mills.
