the Penobacot river is estimated at about 82,000,000 feet.

Poports from the lumber firms of the Ottowa valley tend to show that all the log- and square timber manufactured during the season of 1903-03 will be handled satisfactorily this summer. The past fortnight's rains filled up the smaller creeks and any danger of the timber being hung up has been removed. Most of the stock has already reached the main streams. It will be two or three weeks, however, before the first of the season's logs reach the mills. The Hawkesbury Lumber Company's drive of logs off the Dumoine river came out on to the main stream a few days ago and the Pettawawa drive belonging to the same

Pellawawa drive belonging to the same firm is well on its way.

The Booth-Eddy Hawkesbury upper Dunioine logs from all reports will stay in Robinson lake till next year. The timber drives are also well on their way. E. D. Moore's timber drive passed Dumoine bridge on Saturday. Mr. J. R. Booth's raits from his Mackey limit are well down the river. The steady movement of logs is important in samuch as it will insure an arrivaumly for the milts, all of which emportant intermed as it will insure an early supply for the mills, all of which are rapidly manufacturing all the logs left over from last year. There does not appear to be any danger of any of the mills having to close down this season on account of scarcity of logs.
