## Looks and Lamphlets.

"SHAKESPEARE AS A PHYSICIAN." By J. Portman Chesney, M. D., of St. Joseph, Mo. Published by J. H. Chambers & Co., St. Louis.

This work which consists of about 200 pages, is a handsome volume, alike interesting and unique in its way, and will be highly prized by all lovers of Shakesperian literature. It is divided into nine chapters, one on each of the following subjects: obstetrics, psychology, neurology, pharmacology, etiology, dermatology, organology, chirurgery, and miscellaneous, and contains sixteen illustrations. The work also contains many useful and valuable lessons and suggestions relating to medicine, among the comments by the author. We regret, however to find the work marred by several inelegant expressions, such as the use of the modern and decidedly vulgar word "mash," which is anything but Shakesperian, and not at all in keeping with the text. Again the author seems too ready to obtrude his materialistic views upon his readers, and gives another pretext for the frequent insinuation that the medical profession is tainted with materialism. In commenting upon the following line (p 92), "And his pure brain (which some suppose the soul's frail dwelling-house ") the author says: "We see nothing in man-no trait or attribute which answers to the principle of what people call "soul" except the attribute mind. the immortality of that manifestation I think the motion of my arm just as probable of everlasting preservation."

ELEMENTS OF PHARMACY, MATERIA MEDICA, AND THERAPEUTICS. By Wm. Whitla, M. D. Belfast, with lithographs and wood-cuts. Second edition. London: Henry Renshaw, 356 Strand.

Only a short time ago we noticed the first edition of this excellent little work. The rapid exhaustion of a very large issue of the first edition speaks well for the popularity of the work, and must be very gratifying to the author. The present edition has been carefully revised, and brought up to present date. The alphabetical and sectional way in which the work is divided seems to meet with general approval. Ample space is devoted to Pharmacy, and there is also added a description of all new remedies of note recently introduced. We especially commend the work to the attention of students as
