OUTLOOK IS GOOD AT LARDER LAKE

Government Geologist Favorably Impressed After Examining Working Properties.

Percy E. Hopkins, government geologist, examined the working properties at Larder Lake during the first week of October, 1918, and his report is to hand and would seem to be very favorable to this

mining camp. Most of the work in this section is beng carried on by the Associated Goldfields Mining Company, Limited, and, with reference to this company, the re-

port makes the following statement : Block "B" Associated Goldfields, This property consists of two claims This property consists of two claims, H.S. 114 and 115, on the northwest shore of Larder Lake. An inclined shaft has been sunk to the 65-foot level, where the drifts and crosscuts have been run, and a raise connected with the open pit. From the open pit level a vertical shaft or winze has been sunk to the 500-foot level, station having been put in at each 100-foot depth. On the 500-foot level about 150 feet of drifting and cross-cutting have been done. The openings are all in silicified dolomite, with the exception of a narrow trap dike occurring in the inclined shaft or tramway to the mill. To a depth of 440 feet the workings are largely in gray dolomite, while below this the rock is rich in fuchsite cut by quartz stringers, and carry much tourmaline and pyrite, the quarts at times being a foot or more in width. On the 500-foot level a drive was run into 30 feet of this material, containing visible gold, some of which is quite coarse. The size of this ore shoot has not been determined. The gold, some of which is quite pale in color, suggesting the presence of silver, is usually accompanied with much fine galena. The plant, which is equipped with various motions of the proper strengton in the near future, according to H. B. Wills, in his week-location in the near future, according to H. B. Wills, in his week-location in the near future, according to H. B. Wills, in his week-location in the near future, according to H. B. Wills, is nickely to take over Dome Extension in the near future, according to H. B. Wills, is nickely to take over Dome Extension in the near future, according to H. B. Wills, in his week-location in the near future, according to H. B. Wills, in his excending to H. B. Wills, in his excending to H. B. Wills, in his decending to H. B. Wills, in his according to H. B. Wills, in his decending to H. B. W H.S. 114 and 115, on the northwest shore accompanied with much fine galena. The plant, which is equipped with various motors, consists of a 40-stamp mill, with crushers, amalgamation plates, Wilfrey tables, hoists, compressor, sawmill, planing mill and carpenter shop. The mill is not running at present. Forty men were employed on the property of the propert

employed on the property on Oct. 1. The company intends developing on a much larger scale in the near future.

Block "D" Associated Goldfields. with the constitution of the constraint of the c Block "D" Associated Goidleids.

The pioneer property of the area consists of two claims, H.J.B. 29 and 30, on the northeast arm of Larder Lake. The gold deposits are on the former claim, and a 20-stamp mill, not in use, 1000 feet mission line has been extended to the property and the stope on the 83-foot level has been extended, until it is ap-proximately 250 feet long, 20 feet wide in proximately 250 feet long, 20 feet wide in the centre, and tapering at the end, and 25 feet high (October, 1918). At that time gold could be seen in different parts of the top of the stope. The gold usually occurs in a fine-flour state, with iron pyrites, some copper pyrites, and native copper, along dark or the copper along dark or the copper state. pyrites, some copper pyrites, and native copper, along dark seams of chlorite, cal-cite, fuchsite and other minerals. There is no trouble in finding samples contain-

ing visible gold on many parts of the dump. More aggressive mining will be done on this property.

Other gold prospects upon which some work has been done, and worthy of mention, are the Gold King, Chesterville, Kerr-Addison.

The tournaline at the Harris-Maxwell, and the magnetite on La Mine D'Or Huronla suggest that the deposits were Steel & Rad, commo formed at a high temperature and pres-sure, and at a great depth.

The report concludes that the rusty-weathering carbonate rocks (gold-bearing formation) are found in or near many of

the gold areas of Northern Ontario. They are, however, more widely distributed in Larder Lake than elsewhere, and important, since they appear to contain a greater quantity of gold than the other rocks of the area. These rusty-weathering carbonates are in places delomites. authorities now hold, on a charge of Empire Press Union today resolved ing carbonates are in places dolomite

Power Stocks Lead as a Group, With Shawinigan Most Prominent.

Montreal, Feb. 14,-Another good market at New York encouraged a resumption of buying of Canadian securities today, and the general tone of the market ruled strong, with some new high prices for the movement in leading issues.

Power stocks led as a group, Shawinigan coming into prominence on an advance of 1% to 117. The substantial degan coming into prominence on an advance of 1% to 117. The substantial demand, amounting to about 1900 shares, was promised apparently on expectations of a favorable showing in the annual statement to be submitted to shareholders next week, with Montreal Power a sympathetic influence. Montreal Power itself continued strong, adding at 89% a small fraction to the highest price it ever sold at, with the close firm at 89 bid. Laurentide Power, however, was slightly easier, selling off a fraction, to 61½, but at that price standing only ½-point below its record quotation.

War loans were in better demand, with prices small fractions higher in most cases, and the principal activity centring in the 1922 Victory issue, at 100¼.

Total business for the day, as compared with the corresponding day last year: with the corresponding day last year
