

The student taking the Manual Training Course will also take the regular studies of the Matriculation Course or the General Course, as the case may be.

The Manual Training will occupy three years,—Wood work, the first year, Iron work, second year, and the remaining work, the third year.

All articles manufactured during the regular course of instruction are the property of the School, but Students who, because of aptness and industry, complete the required work before the expiration of the specified time, may make articles of their own choice under the direction of the instructor, and such articles will become their own property upon payment of the price of the material used in making them.

*Further details respecting this Course will appear next year.
