Get Your Drains Tested!

Defective drains and plumbing-work are the chief causes of Typhoid and other fevers. It is necessary that they should be tested once or twice every year to ascertain if they are perfectly tight. This is especially the case at this season of the year, when people are more confined to the house, and windows can only be opened for a short time each day.

We have the latest and most approved appliances for this work.

Moderate Charges for Smoke-Testing.
