

UGG Special Fanning Mills

THE Grain Growers Special Fanning Mills do their work of cleaning and separating thoroughly. They are low down compact machines, which make them very easy to operate. Strong wire screens are used exclusively in this mill—a feature which alone adds years to its life. The feed dam above the hurdle gives practically an automatic feed and is regulated from side. When the feed is once set no regulating is needed. The lower shoe of The Grain Growers Special is equipped with a cleaning bar, thus insuring a clean screen all the time. Clogging is impossible. A long mesh screen is used in the lower shoe for taking out oats.

The mills are equipped for general purpose work. Not only will they clean wheat, oats, barley, flax, clover, timothy, etc., but they will also separate wild oats from wheat or barley, and take pin oats out of wheat or oats. A shoe of nine screens each 23 inches long, and six sieves are furnished with each mill.

Before building the G.G. Special Fanning Mill our manufacturers did a great deal of experimenting. This mill was not marketed until it had proved its true worth by rigid tests. Many features were added so that the farmer would have a mill which would do his work well and give lasting satisfaction.

The fanning mills are built so that power attachments can be easily put on. They are made in three sizes. The No. 3 mill (40 inch) always is sold with both power and hand equipment. Special bagger attachments can be supplied, at additional cost, with each machine if so desired.
