Second Strain Strai

of the company, is devoting special attention to the balance of the outfit,

and expects to have everything at the

mines in good time. . This company is very fortunate in

formed, has secured three valuable claims at the south end of GOWGANDA Lake, the west boundary of the properties being about 30 chains distant from the shore of the lake, and has decided upon a method of development of these claims that will appeal to all men who are interested in a ground-floor proposition.

The usual course followed is for promoters to form a company at a large capitalization, sell the shares and turn the property over in return for the majority of the shares, reaping large profits from the promotion of the Company.

Our plan is to form the MacGREGOR MINES SYNDI-CATE for \$20,000, in shares of one hundred dollars each. The amount to be paid for the three claims is \$16,000, which will place the Syndicate as absolute owners of the properties, and will leave in the treasury a balance of \$4,000 for such work as will enable the Syndicate to realize a high price for the properties.

Two courses are open to the members of the Syndicate :

1st-The selling of one or more of the claims ;

2nd-The formation of a company to work the properties, and the sale of the properties by the Syndicate to the Company.

If there was any reasonable doubt as to the brilliant prospects of these properties, and the desire was simply to get what money was possible out of the claims, the way would be to form a company at once and go ahead and sell stock.

But the plan proposed by us is safer, surer, better for all concerned. It gives the Syndicate members the desired opportunity to reap the big benefits that generally go to promoters, and assures the members that when a Company has been formed the profits and benefits accruing from the promo-

To show our strong belief that the MacGREGOR CLAIMS will prove to be among the most valuable in the district, we have ourselves taken one-quarter interest in the Syndicate, and are therefore interested in the same way as other Syndicate members.

MARCH 18 1909

13

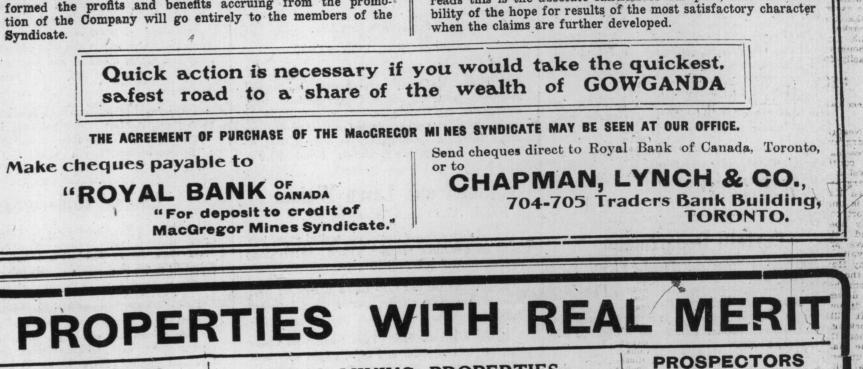

The MacGREGOR CLAIMS, situated right in the heart of the richest section of the famous GOWGANDA district, are three in number, of about forty acres each, or about 120 acres in all, and on all the claims there are several very promising fissure veins showing strong indications of silver. Just south and west of these properties the most valuable discoveries have been made-made while the ground was covered by several feet of snow, which suggests that great expectations will be realized in the spring.

Since the recent wonderful discoveries several properties close to the MacGREGOR MINES SYNDICATE CLAIMS have changed hands for large sums, notably the Reeve & Dobie claims, which sold for \$350,000 ; the Mann properties, at \$250,000, and various others ranging in amounts from \$100,000 up. This goes to show that the splendid silver showings of the district have appealed strongly to investing men. Adjacent to the MacGREGOR SYNDICATE properties is

the famous O'Kelly claim, which is referred to camp visitors as an example of the wonderful prospects of the district. The O'Kelly vein is regarded by mining men as representative of the marvellous wealth of the camp.

So the important point is that all around these Mac-GREGOR PROPERTIES valuable discoveries have been made ; the diabase formation and all other signs show that these claims are right in the silver zone, and are just as sure to show great results as a man can be sure of anything.

One thing that should be impressed upon every man that reads this is the absolute fairness of our plan, and the feasibility of the hope for results of the most satisfactory character
