FACTS AND FANCIES.

To Brighten Carpets.

When a carpet begins to lose its colors, if warm water and ammonia are at once applied, they will restore them. Apply as follows: Into a pailful of warm water put about three or four tablespoonfuls of ammonia, and with a soft flannel cloth dipped in this ammonia water go over the entire carpet, rubbing vigorously. As each portion of the carpet within your reach is washed. This treatment will be found to have effectually renovated the carpet, except it contains certain shades of green which will pother ammonia (it is well to try a washel to see that it is well seasoned, and serve in cups, or on toast.

Devilled Lobster—Remove the meat from a lobster and cut into dice. There should be at least a pint of meat when ready to use. Prepare 1½ cupfuls of white sauce as in the preceding recipe, adding one-third teaspoonful of butter and stir it into one-half cupful of fine bread crumbs. To the sauce add the lobster meat, and one teaspoonful of flemon juice, and arrange in the shell. Individual shells or a baking dish may be used instead of the lobster shell. Sprinkle with the crumbs are a golden brown. Serve at once.

Lobster Cutlets—For each cupful of prepared lobster meat allow one heaping table-spoonful of flour, one even tablespoonful each of butter and chopped parsley, one-half cupful of fine prevention of the carpet, except it contains certain shades of green which will pother ammonia (it is well about them and to tunto dice. There should be at least a pint of meat when ready to use. Prepare 1½ cupfuls of white sauce as in the preceding recipe, adding one-third teaspoonful of butter and stir it into one-half cupful of fine bread crumbs. To the sauce add the lobster meat, and one teaspoonful of flemon juice and strip it into one-half cupful of fine bread crumbs. To the sauce add the lobster meat, and one teaspoonful of lemon juice and strip it into one-half cupful of fine bread crumbs. To the sauce add the lobster meat allow one heaping table sponful of bear ammonia (it is

THE HARNESS .: At This Season of the Year Repair and Oil It Properly.

At this season do not neglect the harness. Take out all the strings, wires, nails and chains that have been used in cases of emergency, and have all the weak or broken places est, and copper does not injure leather as does iron. Have the harness repaired before putting a drop of oil repaired before putting a drop of oil on it. Take apart and put in a tub of warm water. Let it soak until the dirt starts easily. Use soap or soap powder. Wash each piece until clean, then place in such a position so it will drain. A small stiff brush is a good thing with which to start the dirt from the creases. By the time the last piece is washed, the first parts are ready to be blacked. Wipe off all water. Take one strap at a time on a board and with a at a time on a board and with a swab give both sides a going over, after which wipe thoroughly. As soon as each piece is blacked, lay it is a clean place.

in a clean place.

A harness should be blacked and oiled before it has time to get very oiled before it has time to get very dry, for the water opens the pores of the leather and the oil "dries in" much better. As soon as all the har-ness is blacked, put on the oil, go-ing over each piece separately. Let the harness lie over night and the next day go over it again and work the strang through the hands, as this the straps through the hands, as this makes them more pliable. Good neatsfoot oil is best. If the straps are very stiff, add a little kerosene. Two parts of oil and one of kerosene with little kerosene are of kerosene with little kerosene are of kerosene. with a little lamp black make a good oil. But if the harness has been blacked as directed, the lamp black is not needed. Ten cents' worth of blacking will cover two harnesses. Two days is usually enough to get the oil well soaked in, then rub with old papers. If a finished job is de-sired, go over it with castile soap or Miller's dressing. The patent leather can be brightened up by using turpentine and a soft cloth, then rub dry with a clean one.

A dozen rampant wild vines which formerly made a useless tangle of themselves among the trees are now harnessed to the production of salable Worsecond season. Slow growing kinds will do very much better as grafts than upon their own roots. The princi-ple is the same as for cleft earth covering is used in place of wax.

Dig away the soil, saw off

These animals are already in use on a small scale in the Transvaal, and they are suit-able for Africa, because the Tsetse fly does not injure them. They have been tried successfully in Brazil, and

FARMERS' ICE HOUSE. A Novelty in Mest Rural Districts, But It is Entirely and Very Easily Feasible.

Ico in the summer is still a novelty in most rural districts. In cities and villages ice has become a necessity, properly mended. Or if the harness is an old one, fix it yourself with a few rivets. Use the No. 8 copper rivet and burs. They are the strongfeasible, says The London Tarmer's Advocate, either by the association of near neighbors or by every farmer providing for himself an ice house. I consider ice a necessity in every house. It is among the greatest luxuries in the hot weatherslakes thirst better than any other drink—and if it could be universal, would be a strong rival force to the saloon and the grog shop. I have found ice a great help in the dairy business, saving milk, cream and but-ter. Packed with ice in the cooler butter goes to market in the best condition, and secures a better price. articles of food, that would other-

FIG. 1. GROUND PLAN. FIG. 2. CROSS SECTION berries and other small fruits, but the lower temperature makes them I picked the small fruits I needed for the table in the morning, cleaned them, and set the dish containing them in the refrigerator. They were so cool and nice, and we all seemed to relish them so much! A friend of strawberry time, remarked when I ness. She inquired what variety I grew. I told her, and she said they were the best she had ever tasted. I remarked that it was the low temperature of the standard or boards, but good drainage is necesperature which gave them such a sary sweet, cool and delicious taste. She A vine may be grafted in 10 minutes, will make a tremendous growth the first season and bear a big crop of the improved variety the lets. On the ice they are safe for a week after the purchase. Cooked meats are kept in good condition until they are consumed. If the head of the house could only follow the daily waste that goes from his table. his pantry, and his dining-room, for the lack of ice, as his wife is obliged to, he would no longer delay the ice house and the refrigerator. The time within his reach. It requires but lit-tle mechanical skill to construct

> Now, farmers, can you not go to work and make your wife an ice house after my plan or some one else's? You will consider those few days you were building the ice house among those most profitably spent. size required for the holding of ice for a creamery, refrigerator, or other purposes. When packed, fifty pounds of ice will occupy one cubic foot of tpace. Therefore, every forty cubic feet of capacity in a building is equal to the holding of one ton of ice. Where the walls of the ice house are not insulated, the ice should be packed in the building walls, and that space should be pack-ed full of thoroughly dry sawdust. Where that is not convenient, an eighteen-inch space may be left and packed with cut hay or straw entirely free from ice chips and snow. The inside and clap-boarded outside. The door in front is 3 feet wide by 8 feet inches high. A cross section (Fig. house built after this plan for four years, and like it very much.
