

CHAPTER VI.

BEVEL AND SPIRAL GEARING

Various types of such gearing—Bevel gearing for intersecting shafts—Gears for non-parallel shafts not intersecting—Line contact, hyperboloidal gears—Point contact, spiral gears.....Page 75

CHAPTER VII.

TRAINS OF GEARING

Velocity ratio—Reverted trains—Common systems with fixed axles—Epicyclic trains, moving axles—Screw-cutting lathe—Design of trains of gearing—Examples: Weston triplex block, drill, etc.Page 92

CHAPTER VIII.

CAMS

Purpose of cams—Cam for stamp mill—Special cam—Cam for operating shear—General problem, velocity-time curve being assumed.....Page 105

CHAPTER IX.

FORCES ACTING IN MACHINES

Classification of forces acting on machines—Solution by virtual centres—Examples: crank effort, etc.—Solution by photograph—Shear, steam engine, stone crusher, governor.....Page 114

CHAPTER X.

CRANK EFFORT AND TURNING MOMENT DIAGRAMS

Considerations affecting fly-wheel weights, etc.—Steam engine—Crank effort from piston pressures—Piston pressures from indicator diagrams—Comparison of tandem and cross-compound engines—Internal combustion enginesPage 125
