

FURS WANTED

GET the top price for furs. Trapping pays big if you sell your furs right. Lawrence Prentice of Michigan, made \$22.13 extra money in one month by trapping in spare time and shipping the fur to "Biggs at Kansas City." Herman Johnson's trapping last season brought him in \$73.58. Emil Peterson of Minn., bought 75¢ worth of Biggs Baits, and we paid him \$70.45 for the furs he caught.

STEWART M. GRAHAM, LINDSAY, ONT.

Meat Ration at the Front.

An army of the old style carried its fresh meat along with it in the form of live cattle, which were slaughtered as occasion required. The new style army has no cattle in its baggage train, and lives off frozen meat and preserved meat of various kinds. The new method has the advantage of the old in that it ensures a far steadier and more plentiful supply; indeed, it would be quite impossible to feed the enormous armies of to-day by the old methods of foraging or requisitioning among the herds of the country over which the armies are operating, while the question of transport absolutely precludes the idea of importing cattle in live bulk. But for the discovery of new methods the problem of supply would have been insoluble. The soldier's ration in the British Army of to-day consists of 60 per cent. of frozen meat, and as to the remaining 40 per cent. of preserved meat; the requisitioning of five cattle in France and the other countries where our armies are operating is insignificant, and scarcely affects the total.

Frozen meat was issued to the British Army for the first time during the South African campaign, and the experiment proved so successful that at the outset of the present war it was decided to renew it. Contracts were entered into with firms importing meat from the Argentine for a supply of 15,000 tons monthly, and later the Government themselves took over the whole import to this country, working through a Committee of Board of Trade, and still later requisitioned the whole of the shipping engaged normally in the frozen meat traffic. Since these arrangements were made, the consumption of frozen meat by our own troops and the troops of our Allies, for whom we act as purchasing and transport agents, has risen enormously, and the monthly import is now on the average about 55,000 tons, of which 30,000 tons go to our own troops on the various battle fronts. Some of the meat is brought to this country; but the greater part is carried on to the most convenient bases abroad, and there stored for distribution by the quickest and shortest channels to the armies in the field. The supply is regularly renewed, and the stock is always ample. Whatever hardships our men suffer, shortage of meat is not one of them. Besides the Argentine, which is the biggest source of supply, Australia and New Zealand contribute largely to the feeding of our armies, over £40,000,000 worth of beef, mutton and lamb having been bought from the Dominions. In the early days of the war, before prices had risen to their present level, the all-in cost, including transport, was no more than 6½d. per lb. It has now increased to 8½d. per lb.; but, allowing for the great advance in price, the Board of Trade Meat Committee seem to have managed this business both cheaply and well.

The preserved meat rations, which constitute the second staple in the diet of the troops, are served in three main forms. Bully beef, the best known, and—in spite of the sarcasm bestowed upon it—not the least nutritious, consists of corned beef, packed in small, oblong, hermetically-sealed tins. It comprised the principal article of diet of the army on the Gallipoli Peninsula, and constitutes the emergency ration which each soldier at the front must carry in his kit. When taken in moderation, it is by no means unpalatable, eaten either as it comes out of the tin or after being prepared over a fire. Another and more popular form of preserved ration is a combination of about 9 ozs. of meat and ½ lb. of potatoes and other vegetables, cooked and packed in a small, round tin. When warmed up, it forms an appetizing stew. Pork and beans—a ration much favored in the mining and lumber camps of Western America—was introduced experimentally in March, 1916, and, proving acceptable, has now become an established article in the army diet. It consists of haricot beans, cooked in sauce, with the addition of a small amount of pork. Although fresh meat, in the form of frozen meat, preponderates over preserved meat in the proportion of 3 to 2 in the diet of the troops, three and a half million tins of preserved meat and meat and vegetable rations—the latter prepared in this country by about 30 firms, working under the inspection of the Local Government Board—are sent out weekly to the troops in France.—The Scotsman.

Get all the Cream with a Lily

YOU cannot expect to get all the profit from your cows unless you have a separator that skims clean. Why don't you make up your mind now to buy a Lily cream separator, for the Lily skims so close that it leaves hardly a drop of cream in each gallon of skim milk.

Besides saving money, a Lily separator saves a lot of work. It can be kept perfectly clean and sanitary with five minutes' work after each separation. The oiling is automatic. Renew the oil about once a week; fill the chamber to a plainly marked level, then every bearing is oiled by the spray from the spindle drive gear. Nothing could be simpler.

Buy a Lily separator. It skims clean. It is easy to care for. It oils itself. It turns easily. It takes up little room in the dairy. It is a safe, sound, well-made machine, easily kept in perfect working condition. A responsible Company stands behind it. You can't get a better cream separator.

Even though you are not in the market for a separator today, drop us a line so that we can send you full information about this high grade machine. It may save you money.
