

PUT UP THE HEAVY, HOG-PROOF IDEAL WOVEN WIRE FENCE

You want a fence that is so heavy, stiff and strong that it will discourage any attempt at rooting. After an argument with the IDEAL your hogs will become thoroughly discouraged of trying to get under it. The IDEAL is undoubtedly the fence for you.

The IDEAL is the fence the railroads purchase because of its weight and quality. No. 9 hard steel wire throughout. Heaviest galvanizing on any fence. But the IDEAL lock is the BIG reason why you should buy the IDEAL fence. No lock equal to the IDEAL in gripping-tenacity has yet been discovered. Chances are there never will be. When stretched up, IDEAL is a very handsome fence. Every strand measures exactly true. Every lock is

correctly applied. You see, the IDEAL is manufactured by the most improved fence machinery, in a plant that is considered a model among fence factories. With such superior manufacturing facilities the natural result is a fence overshadowing others in quality—and that is IDEAL fence. For further reasons read our free booklet.

Agents Wanted to Sell This Superior Fence

IDEAL Agents make the best living, because IDEAL Fence has the weight, strength and quality that make it sell easiest. Let us send you our money-making proposition.

THE MCGREGOR-BANWELL FENCE CO., LIMITED, WALKERVILLE, ONT.

STAMMERERS

The ARNOTT METHOD is the only logical method for the cure of Stammering. It treats the CAUSE, not merely the HABIT, and insures natural speech. Pamphlet, particulars and references sent on request.

Postage paid. No duty to pay.
Cattle labels with name and address and numbers; sheep or hog labels with name and numbers. Write for sample—free.

F. G. JAMES, BOWMANVILLE, ONTARIO.

QUESTIONS AND ANSWERS. Miscellaneous.

ECZEMA—SULPHUR FOR CAT-TLE.

A fat steer has numerous small lumps on skin. They appear first under the root of tail, and look like a small, white pea. One would think to look at them that there was matter in them, but they seem plump and hard to the touch. It is several weeks since we first noticed them, and thought they might disappear, but there is quite a number now between the hind legs and on the brisket, and a few generally over the body. One under the tail has grown as large as a ten-cent piece, and appears firmly fixed in the skin like a smooth wart. The animal appears in perfectly good health, eats his food regularly, and is thrifty. Will this affect the sale of the animal, or what would you recommend as a remedy?

2. Is it good for cattle to give them sulphur occasionally during the winter months?

Ans.—Wash the affected parts with a solution of corrosive sublimate, 40 grains to a quart of water, once a day for three days. We don't think it should affect his sale.

2. Yes; in moderation, if not allowed out in wet or stormy weather.

LIME FOR STONE WALL—CEMENT IN WALL.

How many cubic feet of stone wall will a bushel of lime build, and how much will a barrel of cement, with gravel and field stone, build?

Ans.—A stone wall requires a cubic yard of mortar to five to eight cubic yards of stone, depending on the building quality of the stone. Mortar is made from about one part of lime to three parts of sand. A bushel contains 32 quarts, and a cubic foot 25 quarts. Since the lime and sand, when thoroughly mixed to form mortar, gives but little more than the bulk of sand, and the mortar in turn fills in the chinks between the stones, a cubic foot of lime would suffice for, approximately, six cubic feet of wall, provided there was no waste. A bushel of lime then would build seven or eight cubic feet of wall. The wall that can be built from a barrel of cement, also, can be given only as an approximation. It will vary with the quality of the cement and the quality of the sand or gravel. In some cases, too, it is possible to work in small stones, provided they are not placed too close to the surface. For wall-building, cement is mixed with sand or gravel in proportions varying from 1:7 to 1:12. If the mixture were 1:10, the barrel of cement would give you 40 cubic feet of concrete. In building, it is calculated that 125 cubic feet of concrete builds 100 cubic feet of wall. Therefore, the barrel of cement would give you, approximately, 32 cubic feet of wall. If small stones can be used freely, it would give more wall.

Newcastle Stock Farm

I have a splendid lot of TAMWORTH SOWS well forward in pig, and well worth looking after; also grand selection of boars, 3 months to 10 months old, several prizewinners, and a lot of dams that have been prizewinners all over this part of Ontario. G. B. Muma, Ayr, Ont. Ayr. C. P. R. : Paris, G. T. R.

When Writing, Mention This Paper.

SHEEP SCAB

And How To Cure It

A book that should be in the hands of every shepherd, farmer and stockman who raises sheep.

It tells what "Scab" is—how to detect it—how the disease spreads—how to cure it—and how to rid the flocks of it.

This book was written by men who have had 65 years experience in raising sheep, and whose famous rams, ewes and lambs have taken first prizes at the leading fairs of the world.

FREE Copy of this valuable book will be mailed free, if you tell us in what paper you saw this advertisement and how many heads of sheep you have.

WM. COOPER & NEPHEWS, TORONTO.
