

# OPENING DAY SATURDAY OCTOBER 28

Having just finished our new and up to date store, we propose to make it one of the days to be remembered. So we have decided to give

## 1 Bag of Redpath's Sugar Absolutely Free

to the person who guesses the correct or nearest number of Beans in the jar shown in our window.

In order to enter this contest the party buying \$1.00 worth of Groceries is entitled to one guess, and the more dollars worth you buy the more guesses you have. \$1 one guess, \$2 two guesses, and so on. All guesses to be in by 10 o'clock Saturday night, October 28th. Immediately after closing of contest the Beans will be counted by Reliable parties and the prize given to the one entitled thereto. In the event of a tie, or should there be more than one correct answer, the lucky parties will be required to draw for first place in a second contest which will be in the hands of the Judges at the time.

#### Prevention of Tuberculosis In Poultry.

It is absolutely useless to treat poultry which is suffering from tuberculosis with any sort of medicine or patent poultry tonics. Preparations which guarantee to cure this disease are pronounced frauds by scientists. Once the bird is infected there is no cure. All effort should be directed to prevent the healthy birds from contracting the disease.

If the flock is small and not of great value and if several birds have died or are known to be affected, it would probably be the part of wisdom to destroy the whole flock and start over again. The poultry house should be scrubbed out with good disinfectant and the walls whitewashed. If the floor of the house is dirt, remove about six inches and bury it out of the way. Resurface with fresh, clean soil. If the floor is well made of either concrete, tile or wood, soak thoroughly with disinfectant. If the floor is not of good material or hard to clean, lay a new one over the old. Turn over the soil in the runs. Boil drinking cups and cleanse all other utensils. After this is well done, secure the new birds, being very careful to purchase them from a flock which is free from the disease.

If the flock is large or valuable and it is decided to attempt eradication without destroying all the fowls, great care and attention, even to the smallest details, are necessary. One will, of course, overlook some of the diseased birds on the first examination, but they may be observed later on when the symptoms are better developed. Keep the floor as free from droppings as possible, and clean out and disinfect at least once a week. Do not allow the young birds to run with the older ones, for they are easily infected. After the first general weeding out, watch the rest and as soon as one begins to appear diseased, remove it from the flock and keep it alone, and then if it develops further symptoms destroy it at once.

For young pigs on pasture the self-feeder has given satisfactory results. Slightly more grain may be required, which is offset by economizing of labor.

The man who improves the live stock of a community or gives it a better variety of corn is deserving of praise as well as he who "plucks glory from the cannon's mouth."—W. A. Lloyd.
