

Milk of Magnesia, P., D. & Co., is a purely aqueous mixture, concentrated and active, each fluid ounce representing about thirty-two grains of magnesium hydrate. It does not contain sodium sulphate. It is entirely stable under ordinary conditions, remaining unchanged indefinitely. The product is valuable as an antacid and gentle laxative in dyspepsia, sick headache, gout, and other complaints attended with hyperacidity and constipation; in diarrhea due to intestinal fermentation; in gastric disorders peculiar to children in which acidity of the primæ viæ is often a prominent feature; and whenever gastric irritability and deranged function are present, as evidenced by nausea, gastralgia, eructation, pyrosis, and other manifestations of hyperacidity. It is pleasant to take, being readily accepted by children and persons of fastidious taste.

### QUININE WITHOUT EBRIETY.

When two such well-known drugs as antikamnia and quinine are offered to the profession it hardly seems necessary to indicate the special classes of affections which call for their use. Antikamnia is unquestionably a perfect substitute for morphine for internal administration. It has complete control over pain, while it is free from the undesirable after-effects of the alkaloid of opium. In cases of malarial fever the combination of antikamnia and quinine should be given. For all malarial conditions quinine is the best remedy we have. But, associated with this condition, there is always more or less pain, and antikamnia will remove these unpleasant symptoms and place the system in the best condition for the quinine to do its work. There are a number of ailments, not closely defined, which are due to the presence of malarial poison. All such conditions are greatly benefited by the use of "Antikamnia and Quinine Tablets." The Antikamnia in these tablets not only relieves the pain, but prevents the ebriety or ringing sensation produced when quinine is administered alone. In headache (hemicrania), in the neuralgias occurring in anæmic patients who have malarial cachexia, and in a large number of affections more or less dependent upon this cachectic condition, the regular administration of these tablets is indicated.—*Medical*
