Great Britain increased on an average 54,441 words each year, equal to 14 per cent. per annum. This may be viewed as the normal increase under a high tariff, inasmuch as throughout these eight years the charges on ordinary messages were never less than 9s. 4d. per word. On May 1st, 1891, the rate was reduced from 9s. 4d. to 4s. per word, and within the 12 following months the business increased by 448,913 words—an increase of 54 per cent. on the business of the previous year, and 831 per cent. over the normal annual increase during the preceding eight years. The further expansion of business will no doubt for the present be disturbed and retarded by an increase in the charges on messages on the 1st January last, but there remains the experience of the year 1891–92 to establish the remarkable effect of a low tariff in stimulating telegraphy. In that single year the increase in the number of words transmitted under a 4s. rate was greater than the growth of the business during the whole of the preceding eight years under a 9s. 4d. rate.

"One of the direct benefits to the public from the Government ownership of the Pacific cable will be the reduction in charges for transmitting messages. I have already mentioned that with a full and efficient staff, such as the estimate for working expenses provides for, it will cost no more to do a large business than a small. There will, therefore, be no reason for preventing the freest expansion of telegraphy by the new line, by lowering the charges. In my humble opinion, the rates across the Pacific should be lowered to 2s per word immediately on the cable being laid, in order that the public may have the advantage of cheaper communication at the

earliest moment.

"The proposed rate of 2s per word for transmitting messages across the Pacific would reduce charges between Australia and England to 3s. 3d. in place of 4s. 9d. as at present. Moreover, messages from Australia received at Vancouver would be forwarded to all parcs of Canada and thu United States for an average charge not exceeding 2s. 9d. per word in place of 6s.—the present

charge.

"Īwish avoid extravagant statements and too sanguine estimates. I would, in submitting my ideas, particularly desire to keep strictly within reasonable probabilities. If we base estimates on the existing volume of business merely, we must anticipate that there will be no great advance over the business of 1891-92 for a few years if the charges on messages are again raised as they already have been to some extent. In the calculations which follow, I shall, therefore, assume the business to be at a standstill for three years; that is to say, I shall assume that the business in 1894 will not be greater in volume than it was in 1891-92, and that thenceforth the normal increase of not more than 14 per cent. per annum shall apply. The number of words transmitted in 1891-92 was 1,275,191. It is assumed that the Pacific cable would, if in operation in 1894, obtain one-half of this business.

	Year.				Number of Words per Annum.	Earnings of the Cable at 2s. per Ward.	he Cable t 2s. per Year.					Number of Words per Annum.	Earnings of the Cable at 2s. per Word.
						£							£

1899					1.084.913	108,391						7	,

"In connexion with the estimates of revenue I have pointed out from statistical returns two elements of incr ase of business—(1) a normal increase under an exceedingly high tariff; (2) a very much greater increase under a lower tariff. There will be a third increase which will be due to the development of traffic with Canada and in bringing the Anatalian Colonies into direct telegraphic touch with the whole telegraph system of North America. At present telegraphic intercourse is insignificant, but with a 2s. or 2s. 6d. rate across the Pacific in place of a 6s. rate by a circuitous route, the circumstances will be favourable to the growth of telegraph business between the two continents, and in consequence the revenue to the Pacific cable from this source will rapidly develope to large proportions.

"In the foregoing estimates of revenue I have reckoned only the normal increase under a high tariff and take no account of the greater increase which certainly will result from the charges being lowered, as proposed. I have likewise added nothing from the Australasia-North American business, the whole of which would flow to the Pacific cable. I san quite warranted, therefore, in expressing the opinion that the estimates of revenue I have presented are not exaggerated or unreasonable, and that the Pacific cable established by Government in the manner proposed would affect very important results. It would practically extinguish all subsidies now paid and render guarantees unnecessary. It would permanently establish low rates for ocean telegraphy. It would yield a revenue which, after paying working expenses, and providing for maintenance and renewals, would make good, all interest charges on the whole cost of the undertaking from the beginning, and in a very few years would furnish large surplus earnings. I venture to think, then, that if the

^{*} At the date of going to press (May 1894) it has been ascertained that the traffic for 1893 between Europe and Australia consisted of 1,306,716 words, showing that Mr. Fleming's estimate is considerably within actual results. If merely the normal increase of 14 per neat, under a heigh tariff be added to existing basiness the number of words for 1894 in the table of estimated cernings which follows should be 744,825 in place of 637,599, and the cernings for the same year 74,483f, in place of 63,769f. Thus establishing that the estimates of revenue presented in this memorandum are in no way exaggerated.
