

# THE "GALT FOUNDRY" ENGINE & MACHINE WORKS

The above cut represents our **No. 1 Tenoning Machine**, with Double Cutter Heads. It weighs 1300 lbs., and cuts 8 inches at one cut, or 10 inches at two cuts.

The **No. 2 Tenoning Machine** weighs 960 lbs., and is intended for Sash, Door and Blind and other work of that kind. It is heavy enough for work in either soft or hard wood ; makes  $5\frac{1}{4}$  inch tenon at one cut.

Our Tenoning, Moulding, Shaping and Mortising Machines have never been beaten at any Exhibition in Canada.

All our Machines are built from New Patterns, with good heavy Iron Frames, and every Machine is tested before leaving the Works.

We devote special attention to Wood-working Machinery, and Engines and Boilers, Shafting, Hangers and Pulleys.
